COMMISSION STAFF WORKING DOCUMENT
Accompanying the document

**REPORT FROM THE COMMISSION TO THE EUROPEAN PARLIAMENT AND
THE COUNCIL**

**on the 2015-2016 implementation of Regulation (EC) No 561/2006 on the harmonisation
of certain social legislation relating to road transport and of Directive 2002/15/EC on the
organisation of the working time of persons performing mobile road transport activities**

**(29th report from the Commission on the implementation of the social legislation
relating to road transport)**

{COM(2018) 698 final}

1. Social legislation in road transport – objectives and key provisions

The EU social rules in road transport are established by four interrelated acts : Regulation (EC) No 561/2006, which establishes rules on driving times, breaks and rest periods for professional drivers, Regulation (EU) No 165/2014 on recording equipment in road transport, Directive 2002/15/EC, which sets out complementary provisions on the organisation of the working time of persons performing mobile road transport activities and Directive 2006/22/EC, which determines minimum requirements for enforcement of these rules.

Regulation (EC) No 561/2006 applies to employed and self-employed drivers engaged in the carriage by road of goods where the maximum permissible mass of the vehicle exceeds 3.5 tonnes and of passengers by vehicles carrying more than nine persons including the driver. The maximum weekly driving time of a driver should not exceed 56 hours (provided that no more than 90 hours are driven in any two consecutive weeks). The total daily driving time should not exceed 9 hours, although twice a week it can be extended to 10 hours. Breaks should last for at least 45 minutes (which may be separated into a break of 15 minutes followed by 30 minutes) and should be taken not later than 4.5 hours of driving period. The daily rest period is determined at the level of minimum 11 hours, which can be reduced three times a week to 9 hours.

The Commission has undertaken an ex-post evaluation¹ of the social rules which concluded that the legislations remain a relevant tool, but it is only partially effective. The effects in terms of enhancing road safety were positive. However, although road safety levels have improved in the period covered by the evaluation, the impact of the social legislation could not be discerned from the impacts of other road safety measures implemented across Member States. The insufficient effectiveness and efficiency of the social legislation is mainly due to the lack of clarity of certain rules, leading to diverging national interpretations and application of the rules, inconsistent and ineffective enforcement practices and a lack of administrative cooperation.

This is the reason why the Commission has tabled two proposals² on 31 May 2017 revising the social rules where discussions are under way since summer 2017 in the European Parliament and the Council.

Regulation (EU) No 165/2014 repealed Council Regulation (EEC) No 3821/85 on recording equipment in road transport. The new Regulation sets out obligations and requirements in relation to the construction, installation, use, testing and control of tachographs used in road transport, in order to verify compliance with the provisions of Regulation (EC) No 561/2006. It also aims at reducing administrative burden and making fraud to the tachograph more difficult. The smart tachograph will be fitted in vehicles registered for the first time as of 15 June 2019. It will feature a new set of advanced communication capabilities with respect to the current digital tachograph, such as satellite geo-localization or short range communication for the transmission of information to enforcement authorities. Those communication

¹ SWD(2017) 184 final from 31.05.2017.

² COM(2017) 277 final and COM(2017) 278 final

capabilities will broaden the areas of enforcement where the tachograph is applied, extending it to, for instance, the control of cabotage operations or the application of the rules on the posting of drivers.

Directive 2002/15/EC, known as the “Road Transport Working Time Directive”, applies to mobile workers such as drivers, crew and other travelling staff, both with the employment or self-employment status. The Directive complements Regulation (EC) No 561/2006 by putting in place limitations on the maximum weekly and maximum average weekly working time of workers in the road transport sector as well as adequate breaks and night work provisions. Working time is defined in the Directive as time devoted to all road transport activities, including driving, loading and unloading, assisting passengers boarding and disembarking from the vehicle, cleaning and technical maintenance and all other work intended to ensure the safety of transport operation. Specific time limits are set out in relation to weekly working time (excluding breaks and periods of availability) which amounts to maximum 48 hours a week, which may be extended to 60 hours, provided that over four months, an average of 48 hours a week is maintained. Moreover, a limitation to 10 hours on daily working time is introduced in case of night work. Each mobile worker is obliged to take a break after working consecutively for 6 hours, which should be at least 30 minutes, if working hours range from six to nine hours and at least 45 minutes, if working time equals to more than nine hours.

Directive 2006/22/EC also called the "Enforcement Directive" aims at verifying compliance and ensuring application of the driver's hours rules established by Regulation (EC) No 561/2006 and Regulation (EU) No 165/2014. The Directive promotes harmonised enforcement of the social rules in road transport by means of minimum requirements for the uniform and effective checks to be carried out by Member States. The minimum threshold of checks of the total number of days worked by drivers falling under the scope of Regulation (EC) No 561/2006 and Regulation (EU) No 165/2014 is set at 3% from 2010. In addition, the total number of working days actually checked should be carried out in a proportional manner for checks at the roadside and at premises of transport undertakings, 30 % and 50 % respectively. In order to encourage cooperation between Member States, an obligation of minimum 6 concerted roadside checks per year undertaken by two or more enforcement authorities was introduced.

This Staff working Document is accompanying the Report and provides more national figures and details as well as updates on other relevant aspects in the field.

2. Checks

As mentioned in the report, total working days checked in the EU continued to decrease since 2013-2014. However, looking at the national figures the decrease of around -12.8% of working days checked seemed to mainly result from the lower number of working days checked reported by Germany, Romania and France³.

³ Germany, France and Romania reported together around 17.4 million less working days checked compared to the last report. Germany explained that data of three Länder were missing for this report.

Overall, the majority of Member States performed significantly more working days checked than required. If 100% represents the minimum threshold percentage of 3%, the top five Member States are France (395%), Germany (382%), Bulgaria (375%), Austria (359%) and Latvia (340%), which accounted for more than half of the working days checked in the EU (around 68 out of 131 million). Compared to the last report, Croatia and Lithuania made great improvements and now meet the threshold of 3%.

Only three Member States did not meet the minimum threshold, namely Greece (5% out of 100%), Netherlands (72%) and Malta (94%).

The Netherlands have applied since 2009 a "monitoring based on trust" system where 64 road transport undertakings have concluded an enforcement agreement with the Environment and Transport inspectorate. The agreement covered over 2.8 million days worked by drivers during 2015-2016 which are in addition to the 1.2 million working days checked reported by the Netherlands. Adding these figures together would allow the Netherlands to meet the minimum threshold. The Dutch authorities informed the Commission that the continuous development and expansion of the risk analysis enables the Dutch inspectorates to focus its efforts on those road transport undertakings whose level of compliance is poor. Furthermore, non-compliant undertakings fall under specialised enforcement and are subject to a rigorously applied corrective procedure.

The Directive also requires that at least 50% of the total number of working days checked should be done through checks at the premises of undertakings and at least 30% on the roadside. However, looking at the number of Member States which have met the threshold, only the following six Member State have the required balanced share between working days checked at premises and the roadside: Bulgaria (59% of working days checked at premises), Cyprus (52%), Latvia (57%), Luxembourg (68%), Romania (51%) and Slovakia (58%).

Based on the figures reported the upward trend continues as regards working days checked at the premises with the EU average rising to 26% compared to 23% in 2013-2014 and 18% in 2009-2010. The most significant improvements compared to the last report were reported by Romania (rise from 14% to 51%) and by Luxembourg (from 39% to 68%). Both Member States have now met the threshold.

Ireland continues to be the only Member State which has not met the threshold for the roadside checks because 93% of total working days are checked at the premises. However, the reason seems to be that not many other non-Irish, except British registered vehicles are circulating on Irish roads.

3. Checks compared to the number of enforcement officers and equipment to analyse tachographs

Based on the number of enforcement officers reported from all Member States, the number of control officers involved in checks remained stable with a slight increase from 61,211 in 2013-2014 to 61,503 in 2015-2016. The number of enforcement officers trained to analyse

the digital tachograph has continued to decrease by 5.7% as well as the units of equipment provided to control officers to analyse the tachograph by 5.5% compared to the last report.

Table 1: Overview of national enforcement capacity in 2015-2016 per Member State

4. Roadside checks

As mentioned in the report, in general 32% of vehicles checked at the roadside are from another EU country⁶. However, in some Member States the percentage of vehicles from another EU country constitutes more than half: namely in Luxembourg (64%), Belgium (62%), Austria (61%), France (60%), the Netherlands (54%) and the UK (53%). The

⁴ Ireland explained that this figures does not include members of the police force and solely refers to staff from the Road Safety Authority.

⁵ Poland explained that this figure does not include police officers involved in roadside checks

⁶ Data from Denmark and Finland are missing for these figures as they were not complete.

geographic location and volume of transit operations may in certain Member States play a factor. Member States whose share of checking vehicles registered in non-EU country was the largest are Slovenia (43%), Croatia (23%) and Lithuania (21%). A complete overview per Member State can be found in Table 2 below.

5. Roadside checks – type of tachograph

According to Article 2 of Directive 2006/22/EC, the threshold of minimum checks of number of days worked by drivers of vehicles will be raised to 4% once 90% of vehicles checked are equipped with a digital tachograph. Compared to the last report, the share of vehicles checked at the roadside that were equipped with the digital tachograph increased from 64% to 72%⁸. There is therefore no base to raise the threshold of minimum checks to 4% for the time being.

⁷ Data not available for Denmark

⁸ This does not include data from Denmark and Finland due to their incompleteness.

The highest share of digital tachograph (above 80%) was found during roadside check in Austria (91%), Luxembourg (86%), France (85%), Slovakia (82%) and Sweden (82%). In contrast, the lowest percentage of digital tachograph was reported in Cyprus (28%) and Greece (27%). Table 3 below provides a full overview.

6. Checks at premises

As indicated in the report, the total share of working days checked at premises has slightly risen by 1%. In total, Member States checked around 663,000 drivers during 2015-2016 which constitutes 12% of drivers compared to 2013-2014. However, there are Member States who significantly increased the numbers of drivers checked at the premises (Hungary by 196 %, Finland by 133% and Luxembourg by 70%). Other Member States covered significantly

⁹ Data is not available for Denmark

¹⁰ Data from Finland was not included to its incompleteness.

less drivers during their checks, namely Ireland (-90%), Greece (-70%), Romania (-67%) and Portugal (-55%).

At the same time, the share of drivers checked at the premises compared to all drivers controlled at premises and roadside, continued to increase throughout the years with 10% in 2015-2016 (9% share in 2013-2014 and 7% in 2011-2013 and 5% in 2009-2010). Table 4 below provides an overview of this share across Member States.

The offence rate per undertaking was extremely high in Latvia (553 offences per undertaking checked), Poland (81 offences), Sweden (76 offences), Germany (65 offences) and Ireland (30 offences).

Figure 4: Share of working days checked at premises checks from 2011-2016 by Member States

7. Offences – detection rate

Like in the last reporting period, it is almost the same small group of Member States who detected over two thirds (73%) of all offences detected. These countries are Germany (32% of total offences), Poland (16%), Austria (11%), Latvia (8%) and Italy (7%). The average share of offences detected on the roadside is around 58% and 42% at the premises of undertakings. Significant disparities continue to exist between Member States as well illustrated in Figure 5 with offence rates. Almost the same Member States are marking the lowest offence rate in the EU: 0.04 in Bulgaria, 0.38 in Hungary, 0.53 in France, 0.99 in

Romania, even though they are among the top seven Member States with the highest working days checked in the EU. At the same time, the following Member States have very high offence rates: 16.89 in Latvia, 8.34 in Greece, 7.59 in Austria, 6.01 in Poland and 6.29 in Cyprus. An important increase in the offence rate can be observed in Greece¹¹ (from 3.10 to 8.34) Luxembourg (from 1.33 to 5.01) and Poland (2.69 to 6.01), whereas a drop was reported by Lithuania (4.07 to 1.9) and Malta (3.03 to 1.61) compared to the last report. The table in Figure 5 provides an overview of the offence rate development since 2011. Given these discrepancies, the enforcement practices across the EU should be aligned, leading to harmonised checks that have similar outcomes. The Commission is currently in the process of establishing a common training curriculum for EU enforcers to ensure that the initial and continuing training enforcers in the EU adhere to a minimum standard and to ensure that enforcement practices are harmonised.

8. Offences detected at roadside

In total, 58% of the total offences were detected on the roadside in the EU, which represents a decrease compared to 63% in the last report. The offence rates found on the roadside were very diverse¹² across the EU. Compared to the EU average of 2.07 offence rates are in particular high in Greece¹³ (11.17), Austria (8.69) and significantly more than the EU average in Slovakia (3.51) Ireland (3.38), Sweden (3.29) and Poland (3.21). Very low offence rates at the roadside were reported in Bulgaria (0.08), Hungary (0.32), Latvia (0.49), Finland (0.5) and France (0.55). A considerable increase in detection rate could be seen in Greece (4.64 to 11.17) Romania (from 0.42 to 1.74), Poland (1.22 to 3.21) and in the Czech Republic (1.11 to 2.59). An important decrease in the offence rate could be observed in Estonia (4.33 to 2.39), in Lithuania (5.77 to 2.33) and Latvia (1.68 to 0.49).

However, in some of the Member States, the numbers of detected offences related to non-national vehicles prevail, namely Luxembourg (84%), Slovenia (79%) Hungary (68%), Belgium (65%), Austria, Bulgaria and France (64%), Sweden (63%) and Lithuania (61%). This may be explained by the fact that many Member States mentioned above performed more controls on non-national vehicles. However, as for Bulgaria, Hungary, Lithuania, Luxembourg, Poland, Romania, Slovenia and Sweden, the offences detected on foreign registered vehicles appear more disproportionate.

9. Offences detected at the premises

Offence rates at the premises of undertakings in the EU are also very diverging. Indeed, several Member States are well above the EU average of 4.19 with the highest detection rate in Latvia (29.27), Poland (12.04), Germany (11.27), Cyprus (10.61) and the Netherlands (9.87). This stands in contrast with countries with a very low detection rate such as Bulgaria (0.02), Croatia (0.02), Portugal (0.06), Romania (0.27), Greece (0.31), France (0.42), UK

¹¹ Greece has however only checked 0.1% instead of 3% of the number of working days required.

¹² All Member States except for Denmark has provided the number of roadside offences.

¹³ Greece has not met the threshold.

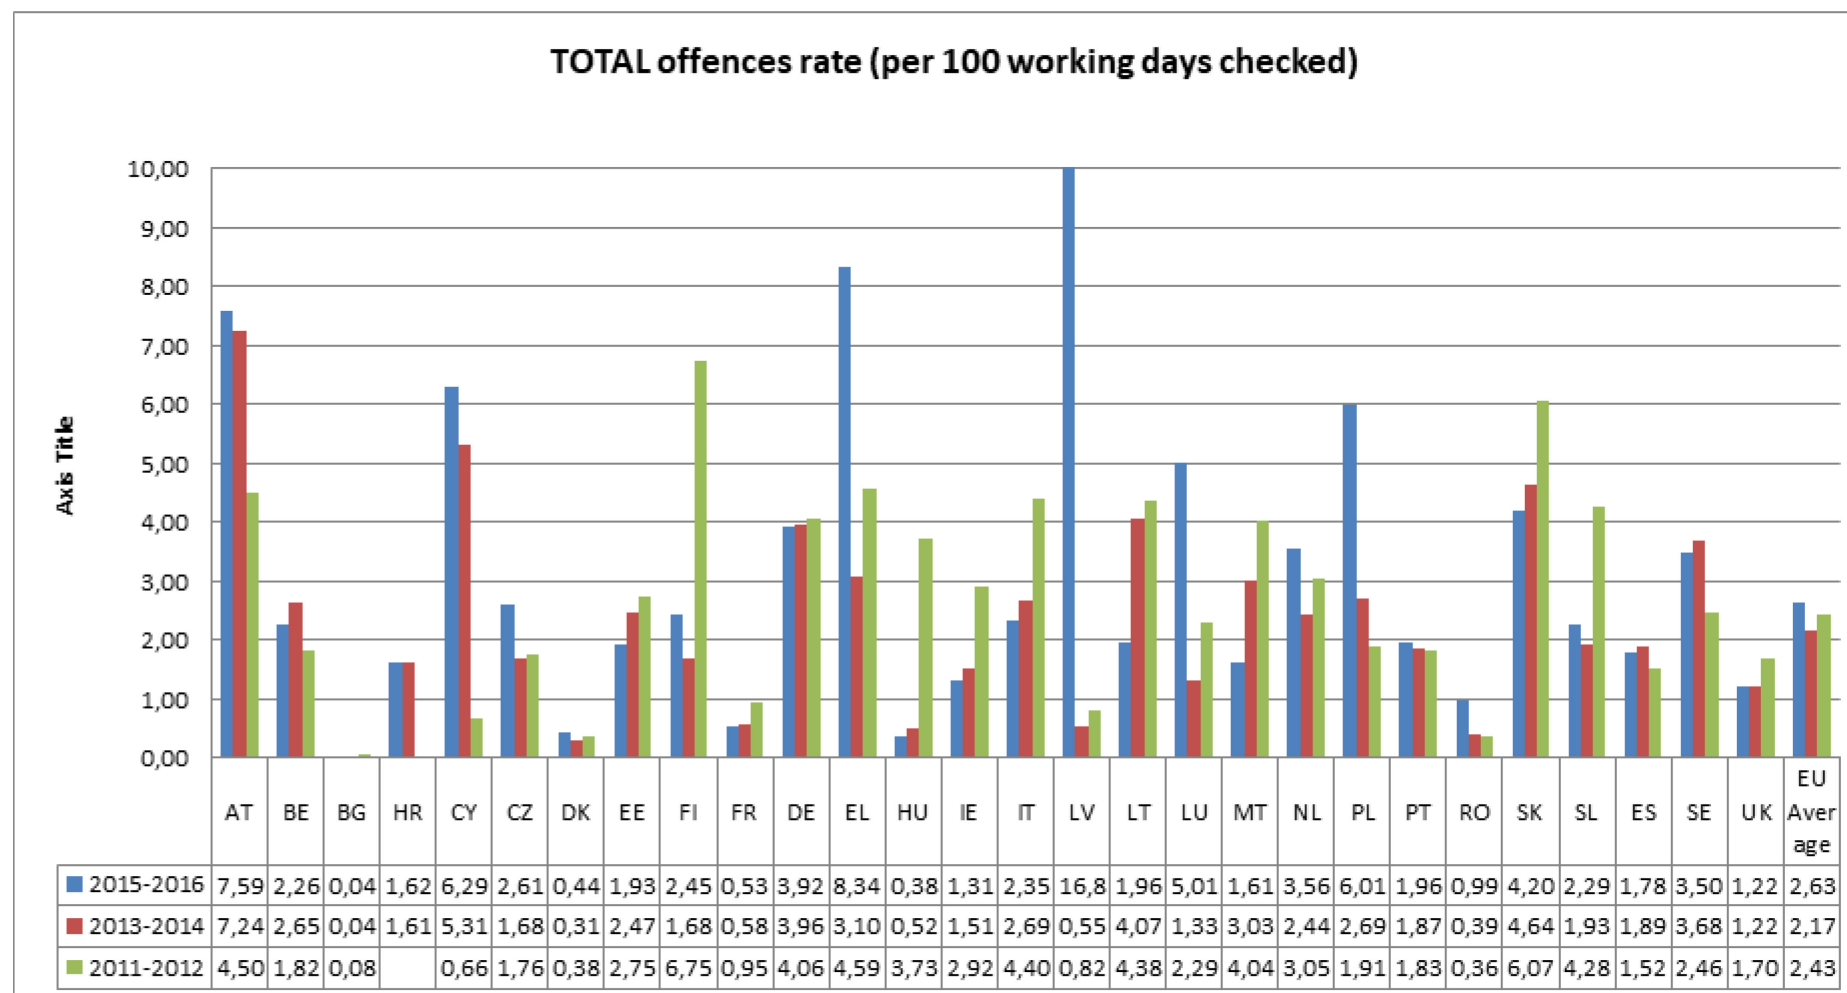

(0.48), Spain (0.63), Malta (0.65) and Hungary (0.79). The majority of these countries, except for Croatia and Malta had also reported very low detection rate in the last report.

Compared to the 2013-2014 reporting period, there is a significant rise in detection rates noted in Poland (from 5.42 to 12.04), Finland (from 3.2 to 6.13), and Luxembourg (from 1.1 to 6.69). In contrast, the detection rate at premises has decreased significantly in Germany (14.01 to 11.27), Malta (4.25 to 0.65) and Sweden (5.41 to 3.89).

Table 5: Breakdown of offences found on the roadside and premises checks in 2015-2016

Checks at	Breaks	Rest periods	Driving time	Driving time records	Recording equipment	Lack/availability of records for other work
Roadside	16%	26%	16%	15%	18%	9%
Premises	26%	21%	10%	33%	5%	5%
Total	21%	24%	13%	24%	11%	7%

Figure 5¹⁴: Total offence rate at the roadside and premises checks by Member States between 2011-2016

¹⁴ Denmark has not provided data on offences detected at the roadside

10. Categories of infringements detected at roadside

The main types of infringements detected at the roadside checked by Member States¹⁵ remained on average relatively similar to the last report in terms of share to the total offences detected at the roadside: breaks (decreased from 17% to 16%), rest periods (increased from 25% to 26%), driving time (decreased from 18% to 16%), driving time record for the preceding 28 days (decreased from 17% to 15%) as well as lack and availability of record for other work remained at 9%. In contrast, the offences detected regarding recording equipment increased from 13% to around 18% of the total offences at the roadside. Offences on the recording equipment comprise offences on the incorrect functioning of the tachograph as well as their misuse and manipulation. On average manipulation and misuse of the tachograph constituted 16% of the overall offences (11% in 2013-2014) at the roadside, so around 317,600 offences between 2015-2016. In Germany (30%), Poland (33%) and the UK (33%) manipulation and misuse of the tachograph made up even around a third of their offences found. However, national authorities, among them the Dutch, informed the Commission, that tachograph fraud and manipulation techniques became increasingly sophisticated and makes monitoring and enforcement more difficult and take up a large amount of available inspection capacity, so the real number of offences is likely to be much higher.

Looking at national figures, the detected infringements on driving time were in particular high in Luxembourg (35%), while offences on breaks were high in Cyprus (31%), Ireland (30%), Slovakia (35%) and Sweden (38%). Offences in rest periods were in particular significant in Belgium (36%), Luxembourg (37%), Romania (40%), Slovakia (38%), Spain (40%) and the UK (42%). In contrast to the low EU average regarding the infringement of providing the driving records, it constitutes a significant share in individual Member States, such as in Bulgaria (33%), the Czech Republic (33%), Italy (41%), Latvia (47%) and Lithuania (33%).

11. Categories of infringements detected at premises

Compared to the last report, offences detected at the premises¹⁶ of undertakings are decreasing, namely on driving time (14% to 10%), breaks (33% to 26%), rest period (24% to 21%) and on lack and availability of records for other work (6% to 5%). Offences on recording equipment rose from 4% to 5% and there is a sharp increase of offences detected on driving time records from 19% to 33%, which have to be kept at least for one year by the transport undertakings. The latter offence is significant in the Czech Republic (54% of national offences detected at premises), Italy (69%) and Poland (80%). A possible explanation was given by the Italian authorities which explained that the low fines for missing driving records would encourage drivers and operators to claim that they are not in possession of driving time records rather than risking to be fined for other offences that are subject to significantly higher fines. Driving time offences were also very high in Greece (44%)¹⁷, Lithuania (36%), Malta (57%)¹⁸, Portugal (32%) and Slovenia (35%). Offences on

¹⁵ Finland did not provide a breakdown of offences at the road.

¹⁶ Finland, Ireland and Latvia did not provide a full or no breakdown of total offences at the premises.

¹⁷ Out of 176 offences at premises reported.

breaks were frequently detected in Austria (56%), Belgium (41%), Finland (46%), Germany (45%), Ireland (55%) and Luxembourg (41%). Infringements on rest periods constituted an important share in Estonia (53%), Greece (52%), Hungary (56%) and Romania (54%). Offences on recording equipment constitute 4% and amount to around 48,800 in total during 2015-2016. Their national share was in particular high in Croatia (22%) and the Netherlands (28%). Infringements on the lack and availability of records of other work were in particular high in Sweden where they constituted 46% of the national offences detected at the premises.

12. Cooperation between Member States

According to Directive 2006/22/EC, Member States are obliged to undertake not less than six concerted roadside checks per year with at least one other Member State. Four Member States¹⁹ did not provide information on the number of concerted checks. Out of the Member States that did provide information on checks, 15 Member States²⁰ met the required number of concerted checks per year.

Table 6 below presents the number concerted checks and exchange of experience carried-out by Member States in 2015-2016. It also provides an overview of the focus of these concerted checks and exchange of experience and which Member States cooperated.

Table 6: Overview of concerted checks per Member States

Lithuania	<p>Between 2015 and 2016, 26 joint vehicle-checking exercises were carried out with officials from the Polish and Latvian inspectorates. Joint checks were carried out with Polish officials in the Kalvarija (LT) – Budzisko (PL) border zone, and with officials from the Latvian inspection body in the Saločiai (LT) – Grenctāle (LV), Smēlynē (LT) – Medumi (LV), Obeliai (LT) – Subate (LV), Būtingē (LT) – Rucava (LV) and Kalviai (LT) – Meitene (LV) border zones.</p> <p>The Inspectorate, together with other Euro Contrôle Route (ECR) member countries, took part in 10 joint freight and passenger vehicle inspections</p>
Luxembourg	<p>2015:</p> <ul style="list-style-type: none"> - 2 checks in Sterpenich with Belgium and Netherlands. - 5 checks in Markusberg and Kaiserslautern with Germany. - 1 <i>Interregio</i> exercise with Germany - 3 exercises <i>BENEFRALUX</i> with Belgium, Netherlands and France. <p>2016 :</p> <ul style="list-style-type: none"> - 30 checks on the Dudelange-Zoufftgen route with France. - 3 checks in Markusberg with Germany - 3 exercises <i>BENELUX</i> with Belgium, Netherlands and France - 1 operation in <i>Hazeldonk</i> with Belgium and Netherlands.
Malta	<p>One concerted check was carried out during software training in Poland on the 24th November 2016 with the Polish Authority</p>
Netherlands	<p>8 checks carried out with ECR/TIPSOL partnership.</p> <p>. Each year between 25 and 30 Dutch inspectors participate in international activities organised by the ECR, such as bilateral and multilateral exchanges of inspectors, workshops and master classes.</p> <p>The Netherlands also invested heavily in initiating, organising and managing these activities during the reporting period.</p>

	In addition, the Netherlands is an active participant in the collaboration within CORTE, which includes work on the development of accepted standardised calculation rules for the calculation of driving times and rest periods on the basis of the applicable EU legislation.
Poland	<p>Road Transport Inspectorate representatives participated in the following coordinated inspection organised by ECR:</p> <p>2015: 7 concerted inspections</p> <p>2016: 7 concerted inspections</p> <p>For both years PL participated at international exchanges on tachograph fraud, passenger transport, secure loading, overloading, social dumping, technical checks of vehicles etc.</p> <p>PL has also participated at the Master Classes on tachograph as well training workshops on transport of dangerous goods.</p>
Portugal	Portugal has participated in the relevant meetings organised by the competent bodies at Community level.
Romania	<p>2015:</p> <p>Concerted checks: 7 concerted checks organised by ECR where member state authorities from Austria, Netherlands, France, Belgium, Poland, United Kingdom, Lithuania, Czech Republic, Slovenia, Germany and Romania participated.</p> <p>Exchange of experience: 3 multilateral events in France, Poland and the Netherlands organised by ECR. 3 workshops in Belgium, Netherlands and Germany. 1 master class in Germany. 1 regional roadside check in Hungary. 2 bilateral roadside checks organised with Hungary.</p> <p>2016:</p> <p>Concerted checks: 7 concerted checks organised by ECR with participants from Belgium, Croatia, Ireland, Germany, Netherlands, France, Spain, Austria, Poland, Hungary, United Kingdom, Bulgaria, Lithuania, Luxembourg, Czech Republic, Slovenia and Romania.</p> <p>Exchange of experience: 4 multilateral events in France, Belgium, Poland and Hungary by ECR. 1 workshop in Belgium organised by CORTE and CVSA USA. 2 master classes organised in Germany by ECR. 4 bilateral roadside checks organised between Romania and Hungary.</p>
Slovakia	<p>Concerted checks:</p> <ul style="list-style-type: none"> • 7 checks with the Czech Republic.

	<ul style="list-style-type: none"> • 4 checks with Hungary • 1 check with Poland.
Slovenia	<p>Concerted checks: 3 concerted checks with Hungary and Croatia.</p> <p>Exchange of experience: Slovenia has a status of an Active observer in the ECR organisation. In 2015 and 2016 inspectors participated in Multilateral concerted checks in other ECR member countries.</p>
Spain	<p>Concerted checks: 8 ECR coordinated controls (4 per year each in 2015 and 2016) 6 ECR/TIPSOL coordinated controls (3 per year each in 2015 and 2016)</p>
Sweden	<p>2015: Concerted checks: 7 different checks with Norway, Denmark, Poland and Romania.</p> <p>2016: Concerted checks: 8 different checks with Norway, Denmark, Germany, Hungary and their neighbouring countries.</p>
United Kingdom	<p>2015 and 2016: Concerted checks: 7 checks each year with ECR members including Ireland, Belgium, Luxembourg, Netherlands, France, Germany, Poland, Austria, Romania, Bulgaria, Hungary Lithuania, Slovenia, Czech Republic and Croatia.</p> <p>Exchange of experience: UK hosted an exchange in 2015 involving Great Britain and the Netherlands on remote enforcement and targeting. In 2016 UK hosted an exchange involving Great Britain, Belgium, Netherlands, Luxembourg, Slovenia, France, Poland and Ireland.</p>

13. Penalties

Article 19 of Regulation (EC) No 561/2006 sets out that Member States shall lay down rules on penalties that are to be effective, proportionate, dissuasive and non-discriminatory. Member States shall notify the Commission of these measures and the rules on penalties. For the current report, the Commission has been notified of the following:

Multiple Member States namely Austria, Bulgaria, Czech Republic, Denmark, Estonia, Spain, Ireland, the Netherlands, Romania, Slovenia and the UK have increased fines in 2015 and 2016 for tachograph related infringements – such as fraud, lack of tachograph systems but also relating to the rules for driving and rest times. Denmark for example introduced a general tolerance limit of 5% with anything beyond this number being prosecuted. In addition, drivers who deviate from the maximum driving time or minimum rest time by more than 30% will be disqualified. Similarly, Romania introduced a system where vehicles can be immobilised in order to restore compliance with the driving and resting time rules.

A number of Member States raised the amount of the fines in proportion to the severity of the infringement. These Member States have also indicated that the higher fines have ensured more compliance with the rules and regulations by both undertakers and drivers.

14. Exceptions granted by Member States

According to Article 13 of Regulation (EC) No 561/2006, Member States may grant exceptions from the application of provisions on driving times, breaks and rest periods, provided that certain specific conditions are met and that the overall objectives of the Regulation are not prejudiced. Member States are obliged to inform the Commission of the exceptions granted.

Since the previous report, Romania added the exceptions of (f), (g), (h), (j) – concerning vehicles under 7.5t for gas/electricity, circus and funfair vehicles, milk or animal feed transportation and hub facilities.

The same information is also available on the Commission's website²¹.

1. The following Member State introduced additional restrictions:

a. The United Kingdom: a vehicle does not fall within the description specified unless the vehicle:

(a) is being used for the provision of ambulance services- (i) by a relevant National Health Service (NHS) body, or (ii) in pursuance of arrangements made by or at the request of a relevant NHS body, or made with the Secretary of State or with the Welsh or Scottish Ministers;

(b) is being used for the transport of organs, blood, equipment, medical supplies or personnel - (i) by a relevant NHS body, or (ii) in pursuance of arrangements of the kind mentioned in paragraph (a)(ii)

(c) is being used by a local authority to provide, in exercise of social services functions - (i) services for elderly people, or (ii) services for persons to whom section 29 of the National Assistance Act 1948 (welfare arrangement for physically and mentally handicapped persons) applies;

(d) is being used by Her Majesty's Coastguard, a general lighthouse authority or a local lighthouse authority;

(e) is being used for the purpose of maintaining railways by the British Railways Board, any holder of a network licence (within the meaning of Part 1 of the Railways Act 1993) which is a company wholly owned by the Crown (within the meaning of that Act), Transport for London, any wholly owned subsidiary of Transport for London, a Passenger Transport Executive or a local authority

(f) is being used by the British Waterways Board for the purpose of maintaining navigable waterways

2. The following Member States introduced additional restrictions:

a. Estonia - within a radius of 50 km of the place where the vehicle is usually based, including towns within this area

b. France - only vehicles or combinations of vehicles up to 7,5 tonnes and only within a radius of 50 km

c. Slovenia – within a radius of up to 50 km

d. Spain – agriculture etc. own activity within a range < 50 km

e. The United Kingdom - a vehicle which is being used by a fishery undertaking does not fall within the description specified unless the vehicle is being used:

(a) to carry live fish, or

(b) to carry a catch of fish from the place of landing to a place where it is to be processed

3. The following Member States introduced additional restrictions:

a. Slovenia - within a radius of up to 50 km

4. The following Member States introduced additional restrictions:

a. Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Finland, France, Hungary, Italy, Latvia, Lithuania, Luxembourg, the Netherlands, Poland, Portugal, Slovakia, Spain – within a radius < 50km

b. The United Kingdom – vehicles between 3.5 - 7.5 tonnes used by universal service providers within a 50 km radius of the base of the undertaking require a tachograph

5. The following Member States introduced additional restrictions:

a. France - operating on islands <400 square km

b. Spain – operating on islands < 250 square km

6. The following Member States introduced additional restrictions:

a. Croatia, Cyprus, Czech Republic, Estonia, Finland, France, Hungary, Lithuania, Poland, Portugal, Slovakia, Spain – within a radius < 50km

7. The following Member States introduced additional restrictions:

a. Italy - it refers only to the obligation of equipping and using tachograph

b. Luxembourg - exception only for the (learning) driver, instructor must respect Regulation (EC) No 561/2006

8. The following Member States introduced additional restrictions:

a. Austria:

- (a) vehicles used by the regional authorities' road construction offices and driven by employees of the provinces or municipalities are entirely exempted
 - (b) vehicles used in connection with sewerage, flood protection, water, gas and electricity supply, telegraph and telephone services, radio and television broadcasting, and the detection of radio or television transmitters or receivers are entirely exempted where driving of vehicles does not constitute the driver's main activity
 - (c) vehicles used by household refuse collection authorities are exempted only from the rules on breaks under Article 7 of Regulation (EC) No 561/2006
 - (d) vehicles used in winter by road construction offices, where not covered by the exemption under point 9 a.(a), are exempted only from the rules on breaks under Article 7 of Regulation (EC) No 561/2006
 - b. France - for door-to-door household refuse collection and disposal, only within a radius of 100 km
9. The following Member States introduced additional restrictions:
 - a. Estonia - owner/authorised user of a vehicle with 10-17 seats who is a parent of 4/more children, respective entry made on a registration certificate of the vehicle and the vehicle is used for non-commercial passenger transport
 - b. France - not for the transport of children
 10. The following Member State introduced additional restrictions:
 - a. Spain - only when own activity
 11. The following Member States introduced additional restrictions:
 - a. Austria - vehicles used to collect raw milk from farms exempted only from the rules on breaks under Article 7 of Regulation (EC) No 561/2006
 - b. Estonia, Latvia and Lithuania, as of 1/01/2008, mutually apply the exception from Articles 5 to 9 to vehicles used for milk collection from farms,...etc., only in cases where the service radius does not exceed 100 km
 - c. France - within a radius of up to 150 km of the base of the undertaking
 - d. Germany – within a radius of 100km
 - e. Spain – milk/animal feed from /to farms within a range < 100 km
 12. The following Member States introduced additional restrictions:
 - a. Austria – exception only from the rules on breaks under Article 7 of Regulation (EC) No 561/2006
 - b. Ireland - vehicles specially designed for mobile banking, exchange and saving transactions
 13. The following Member State introduced additional restrictions:
 - a. Germany - within a radius of up to 250 km of the base of the undertaking
 14. The following Member State introduced additional restrictions:
 - a. The Netherlands – on or between hub facilities within a range of 5 km
 15. The following Member State introduced additional restrictions:
 - a. Belgium, Croatia, Cyprus, Czech Republic, Estonia, Finland, France, Hungary, Latvia, Lithuania, the Netherlands, Poland, Portugal, Slovakia, Spain, Sweden – within a radius < 50km

16. Comments and proposals

Some Member States shared their views regarding the Commission's proposal as part of the Mobility Package I²². Finland express its doubts regarding the amendment to Directive 2006/22/EC that would extend the scope of the monitoring requirements to include the Road Transport Working Time Directive 2002/15/EC which could lead to problems to coordinate those in practice. Slovakia also shared its doubts regarding the proposal to amend Regulation (EC) No 561/2006. This related in particular to the provisions on the duration for the regular weekly rest²³, the total accumulated driving time during any two consecutive week²⁴ Regulation (EC) No 561/2006 and in particular the provision of Article 8.2 on new daily rest period.

Some Member States referred to the training of enforcers at national level and the importance of joint inspections. The Dutch authorities highlighted that increasingly sophisticated tachograph fraud and manipulation techniques make monitoring and enforcement more difficult and take up a large amount of the available inspection capacity. Professional development training for inspection staff and the expansion and renewal of inspection methods and equipment create significant pressure on the available work force and funds. Therefore, the Netherlands invests heavily in sharing and maintaining the necessary expertise and information within the ECR, TISPOL and Benelux networks in order to keep abreast of developments in the field.

The Czech Republic also flagged out the importance of proactive involvement of Czech representatives in activities on the ECR agenda and that there was desire for a constant deepening of professional knowledge regarding inspection procedures in all specific areas of inspection activity.

Austria authorities also shared the fact that the training programme of their Federal Ministry of the Interior and the Federal Ministry of Labour, Social Affairs and Consumer Protection includes regular courses for the inspection bodies. The training covers social legislation and the detection of manipulation and is based on the TRACE project.

It is worth noting that the Commission is planning on elaborating common criteria for training of enforcers across the EU which would allow for a more consistent approach to enforcement throughout the EU.

17. Interpretation of Regulation (EC) No 561/2006 and Directive 2002/15/EC

In the recent years, the Court of Justice of the European Union shed light on interpretation of Regulation (EC) No 561/2006 by means of the following preliminary ruling:

Judgment of the European Court of Justice of 20 December 2017 in case C-102/16

The case relates to the ban for drivers to take their regular weekly rest period in their vehicle. Regulation (EC) No 561/2006 on the harmonisation of certain social legislation relating to road transport requires drivers to take a regular daily rest period of at least 11 hours (which may, subject to certain conditions, be reduced to 9 hours) and a regular weekly rest period of 45 hours (which may, subject to certain conditions, be reduced to 24 hours). The regulation adds that, if a driver chooses to do so, daily rest periods and reduced weekly rest periods away from base may be taken in the vehicle, as long as it has suitable sleeping facilities for each driver and the vehicle is stationary. The question at stake in this case was whether Article 8(6) and (8) of Regulation No 561/2006 must be interpreted as meaning that the regular

²² Proposal for a directive of the European Parliament and of the Council amending Directive 2006/22/EC as regards enforcement requirements and laying down specific rules with respect to Directive 96/71/EC and Directive 2014/67/EU for posting drivers in the road transport sector - COM(2017) 278 final

²³ Article 4(h) of Regulation (EC) No 561/2006

²⁴ Article 6.3 of Regulation (EC) No 561/2006

weekly rest periods referred to in Article 8(6) of the regulation may not be spent inside the vehicle. The ECJ concluded that the EU regulation harmonising social legislation in the road transport sector clearly prohibits drivers from taking their regular weekly rest periods in a vehicle

Regarding judicial interpretation by national courts, none of the Member States reported any significant national court decisions interpreting Directive 2002/15/EC during 2015-2016.

18. Monitoring and control arrangements of Directive 2002/15/EC in Member States

Member States indicated that they had implemented Directive 2002/15/E. The monitoring of implementation of Directive 2002/15/EC is ensured at national level by different authorities from one Member State to another. Overall and across the EU, the bodies responsible for the monitoring and control arrangements of Directive 2002/15/EC are the labour inspectorate, road transport agency, occupational health and safety authority, road safety authorities and road transport inspections.

19. Issues in relation to enforcement of Directive 2002/15/EC

A majority of Member States did not report having experienced issues in relation to enforcement of Directive 2002/15/EC. Some Member States shared specific issues they face at national level.

In Italy, definitions on “time devoted to all road transport activities” and “periods of time during which the mobile worker cannot dispose freely of his time” cause interpretation issues and Italy feels a need to clarify those definitions. The United Kingdom noted that working time records are not checked at the roadside due to the fact that 17 weeks of records are not required to be held in the vehicle. In Czech Republic, a new work pattern by which one employee (driver) works for two employers (transport undertakings) gave rise to difficulties to implement the Directive. Indeed, such practices were reported as being difficult to prove as only a transport undertaking subject to Regulation (EC) No 561/2006 is required to request a copy of a working-time record from another employer. Slovakia reported its infrastructure as lagging behind considering the expansion of road freight transport and that it was thus working on its motorway network and on building more parking areas.

20. Statistics on working days checks at the roadside and premises

MS	Minimum checks (3%) for 2015-2016	Number of working days checked

* no full breakdown of offences provided.

22. Stakeholders' views on implementation of Directive 2002/15/EC in Member States

Only ten Member States clearly indicated that stakeholders were consulted in the framework of this reporting exercise²⁵. This number is stable compared to the last report but still low compared to previous years²⁶. In all Member States, this consultation consisted in getting the views of representatives of employers and trade unions. In six out of ten Member States, social partners were consulted but their views did not give rise to a separate section²⁷. They were rather incorporated throughout the document or, in a few cases, it was indicated that social partners did not have any comments. Therefore, opinions from social partners cannot be analysed as this does not constitute a representative sample²⁸.

²⁵ Cyprus, Estonia, Finland, France, Ireland, Italy, Lithuania, Poland, Slovenia and Slovakia

²⁶ Ten Member States consulted stakeholders for the last reporting period and 16 the reporting period 2011-2012.

²⁷ Cyprus, Estonia, Finland, France, Lithuania, Poland,

²⁸ Ireland, Italy, Slovenia and Slovakia
