Preface

The multipurpose nature of Time Use Surveys provides data for a variety of policy uses. Diary based Time Use Surveys reflect actual social behaviour more accurately than other measurement techniques used and the results from the Time Use Surveys can give extended information about household work, hours actually worked, means and habits of transport, voluntary work, leisure time etc. It is also possible to describe the time use of different groups of the population. This working paper firstly gives an overview of the main results already published in a Statistics in focus (Population and social conditions 12/2003) and secondly detailed tables for subpopulations according to stage in life, starting with young persons living with parents and finishing with elderly persons living alone. The reference year varies between the countries - just before or just after the year 2000.

Time Use Surveys have a long history in many countries but survey design and contents have not been harmonised. In late 1996 and early 1997 a series of pilot surveys were conducted in nine Member States and nine Central Eastern European (Phare) countries. Eurostat implemented the pilot surveys in order to improve survey tools and to identify possible shortcomings of the survey design. The survey design was essentially an amalgamation of the main features of Time Use Surveys previously carried out in a number of EU and EFTA countries.

The overall conclusion from the pilot studies, presented at the SPC meeting in March 1998, was that harmonisation of time use data would be feasible despite apparent differences between countries. The SPC gave Eurostat a mandate to work out recommendations for harmonised European Time Use Surveys in order to ensure that Member States going ahead with Time Use Surveys could do so on a comparable European basis. A detailed activity classification of primary activities was developed to increase the opportunities for comparability in the uses of the data. Guidelines on harmonised European time use surveys were published by Eurostat in September 2000.

Thirteen Member States, EFTA countries and Phare countries have now produced results. Further Member States and Phare countries are conducting the survey now or planning to conduct a survey. In all it will be possible to have data with a reference year around the year 2000 from all MS except Austria, Ireland and Greece. Norway has conducted a survey as well as a number of candidate countries. Some countries have performed a simplified survey and the results are not fully comparable. Others have deviated from the guidelines in order to maintain the comparability with previous surveys.

We have a great pleasure to present this work, which is the result of a joint effort of the participants in the Eurostat Time Use Task Force. We would like to congratulate all those who have contributed to the preparation of this working paper and we hope that this publication and these tables will promote the use of time use data to describe social patterns in different stages of life. Also we want to stress that these tables show only a very small part of the possible statistics that could be produced with time use data.

Head of Unit, Eurostat
Labour Market

1. How women and men spend their time Results from 13 European countries

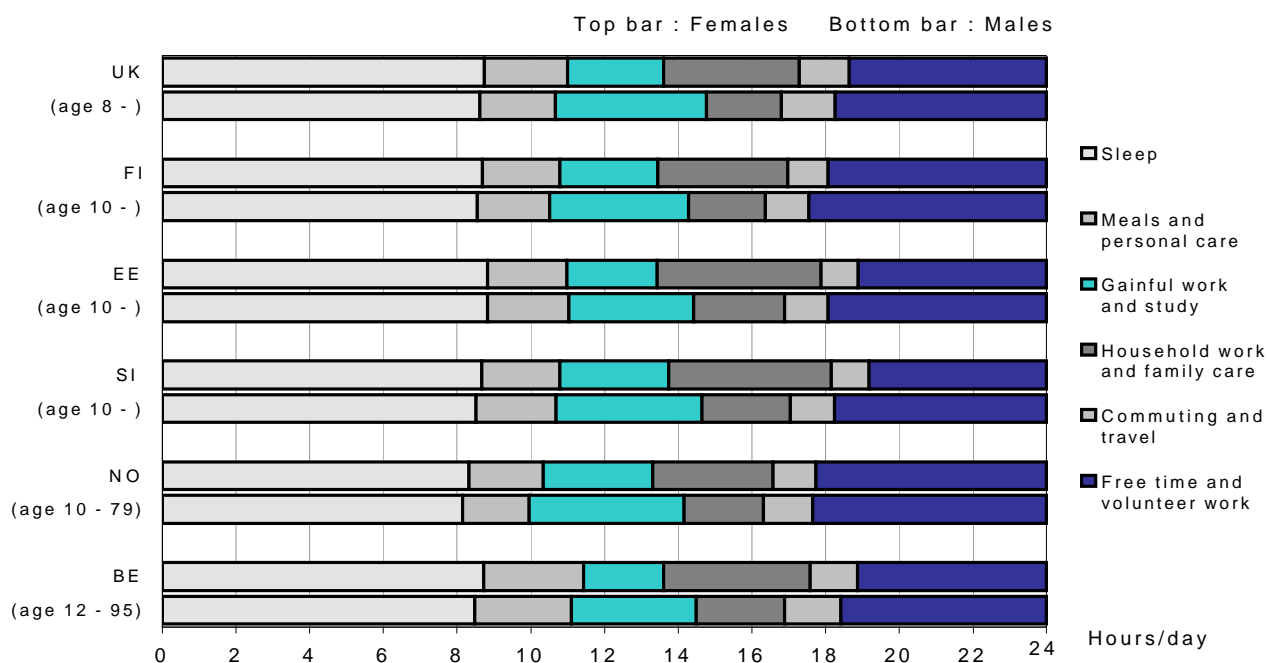

Overview

Women and men have similar patterns of spending their time across Europe but there are also some remarkable differences between the countries investigated. The total time spent on gainful work/study and domestic work (definition of activities, see Methodological Notes) varies between 6 and 7 hours per day when taking an average over the whole year – all weekends and holidays included, see figures 1-3. The time is highest in Slovenia and Hungary and lowest in Belgium and Finland. Daily commuting and travel time is around 1 hour, somewhat more in the United Kingdom, Sweden and Belgium and somewhat less in France and Hungary.

Free time is time devoted to television-video or to other media, leisure time (sports, hobbies, resting and unspecified leisure) and socializing time (participatory activities, social life, entertainment and culture). These activities occupy 4½ to 6½ hours per day, more in Norway and Finland and less in France and Hungary. Volunteer work and informal help to other households is classified with free time in the figures.

Finally, women and men devote almost half of their time to sleep, meals and personal care. People sleep between 8 and 9 hours per day on average and devote between 2 and 3 hours to meals and other personal care (dress, toilet etc.). France shows the longest average sleeping time with slightly more than 9 hours and also more time spent on personal care than other countries (table 1). In all countries, women devote slightly more time than men to sleep except for Estonia where the time is equal. The same is true for personal care except for Hungary, Estonia and Slovenia. If the description only includes persons in employment, the results are very similar.

Figure 1 Average time use by activity for females and males.

Survey period: A full year during 1999-2001.

Sources: National Time use studies, see Methodological Notes

Several European countries have conducted recent time use studies. A sample of individuals has each kept a diary for two days, distributed over the whole year. The results, presented as average time per day over the whole year, allow us to describe how time is spent; for example, how working time and the time for other activities are distributed for persons in different stages of life in these countries. Some survey results are available for 13 European countries. Figure 1 presents statistics for the United Kingdom, Finland, Estonia, Slovenia, Norway and Belgium. The surveys in these countries follow, to a large extent, the harmonized guidelines issued by Eurostat. This means that they are comparable between countries, concerning the slight differences in age groups covered, see below. Figure 2 presents results for France, Hungary, Sweden, Denmark, Romania, the Netherlands and Portugal. These countries have deviated from the guidelines and the main problem of comparability is the difference in age group covered by the survey. Note that the survey in France was done before the 35 hours reform, see more notes on page 7 about the methodologies and differences in methodology that might influence the results. In Figure 2, results from the Netherlands, Romania and Portugal are included although they are not comparable with the other countries. On the other hand, it is possible to compare women and men within each country. The Netherlands have conducted their survey with a simplified method while Portugal and Romania have only covered two months in the autumn. Denmark has covered 2 months in the spring and 2 months in the autumn. For Portugal, at present only results for the total population are available.

Figure 2 Average time use by activity for females and males. Results are not fully comparable

For Denmark, Romania, the Netherlands and Portugal the survey period/design is different.

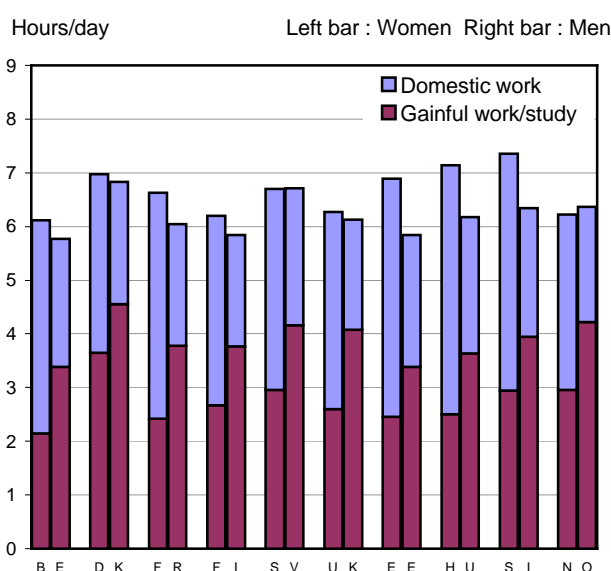

Sources: National Time use studies, see Methodological Notes

There is a large difference in the gender division of gainful work and domestic work

Domestic work (household work, errands, do-it-yourself, care of children and of adults, etc) takes up more time than gainful work/study in Belgium, France, Estonia and Hungary and less time in Norway, the United Kingdom and Finland. The fact that the age group of the population surveyed is different will influence the results. In the countries where the survey is restricted so that very young and very old persons are excluded, the average time for gainful work/study is higher. This is the case especially for Sweden and to some extent for Denmark (Sweden age 20 – 84 and Denmark age 16 – 74). Table 1 shows that in Sweden, on an average day over a whole year, 49% of men and 37% of women perform gainful work and the corresponding figures for Denmark are 45% and 37%, while the percentages for other countries are generally lower.

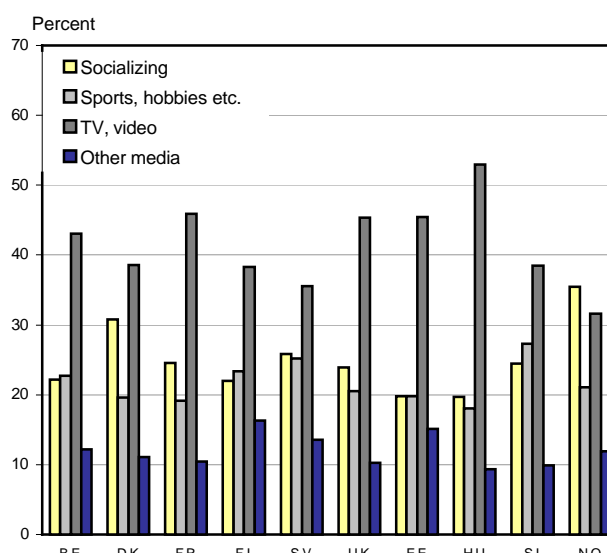

For women and men the division of the time between the two types of work is very different. In all the countries, men devote more time to gainful work/study than to domestic work. On the other hand, the time used for domestic work of women is on average higher than the time in gainful work/study in almost all the countries, except for Denmark and Norway, where this time is nearly the same. Note that these divergences reflect partly differences between men and women in employment and part-time employment rates in the various countries. Estonia, Hungary and Slovenia show the highest time for domestic work - in particular among women. Men spend on average at least one hour per day more than women do on gainful work/study, while women devote at least one hour more than men do to domestic work. In addition, if the average total time of gainful work/study and domestic work per day is considered, working time of women is somewhat higher than that of men in Belgium, Finland, France (from 20 minutes to more than 30 minutes). It is even higher in Estonia, Hungary and Slovenia (1 hour approximately) and it is virtually equivalent in Sweden, the United Kingdom, Denmark and Norway.

Figure 3. Total working time for women and men

Survey period: A full year during 1998-2001.

Figure 4 : Free time by type of activity (%)

Survey period: A full year during 1998-2001.
Sources: National Time use studies, see Methodological Notes.

Watching TV takes about 40% of free time in most countries

Depending on country, free time is between 4½ hours and more than 6 hours taking the average for all days of the year, see Table 1. Free time includes leisure time (sports, hobbies, resting and unspecified leisure), socializing time (participatory activities, social life, entertainment and culture) and time devoted to television-video and other media.

Both for women and for men, watching television occupies an important share of free time, around 40% in the majority of the countries. Hungary exceeds 50% while this share is below 40% in Norway and Sweden. Socializing time occupies 20 – 25 % of free time in most countries. This is slightly higher than the time spent on sports, hobbies etc. in the majority of the countries, with the exception of Denmark and Norway, where the share devoted to socializing is higher, see Figure 4. In Norway, some of the time for meals – eating together with someone – has been classified as socializing, giving Norway a slightly higher share for socializing (and a shorter time for meals).

In all the surveyed countries, men have overall more free time than women, these differences reaching almost 1 hour per day in Estonia, Hungary and Slovenia. In general, free time is spent very similarly but on an average day there are more women than men declaring some socializing time, the divergences being particularly marked for Finland, the United Kingdom, Sweden and Denmark, see Table 1.

Employed persons sleep less and have less free time

Persons who are employed have more of their time predetermined. Employed persons are all employees and self-employed including persons who are temporarily absent (including those on maternity/paternity/parental leave or vacation). For all the countries, they have shorter sleeping time (10 – 30 minutes per day on average) and devote overall less time to domestic tasks, including care of other persons (childcare, etc.). Employed men devote more time to gainful work/study than women do, which is partly explained by the more widespread part-time work among women and by women taking more parental leave. The total time devoted to work including domestic work is higher than for the remainder of the population. Women's total time for gainful and domestic work is about ½ hour higher than men's in Belgium and France, even higher (about 1 hour) in Estonia, Hungary and Slovenia and almost equivalent or equivalent in Sweden, Finland, the United Kingdom, Denmark and Norway.

Employed persons reduce their time for sleep, meals and personal care but also their free time. Even if the time is reduced, the share of the time devoted to TV and video is not lower than that of the remainder of the population. Lastly, for employed persons, socializing time seems to occupy a more important share in relation to the time spent on sport, hobbies etc. than in the whole of the population. The share of persons involved in leisure activities on an average day is less for employed persons.

Hours and minutes gives average time per day over the whole year, % gives percentage of persons per day who has performed the activity. Survey period: A full year during 1998-2001. Sources: National Time use studies, see Methodological Notes.

The differences in time use between women and men are larger in households with children

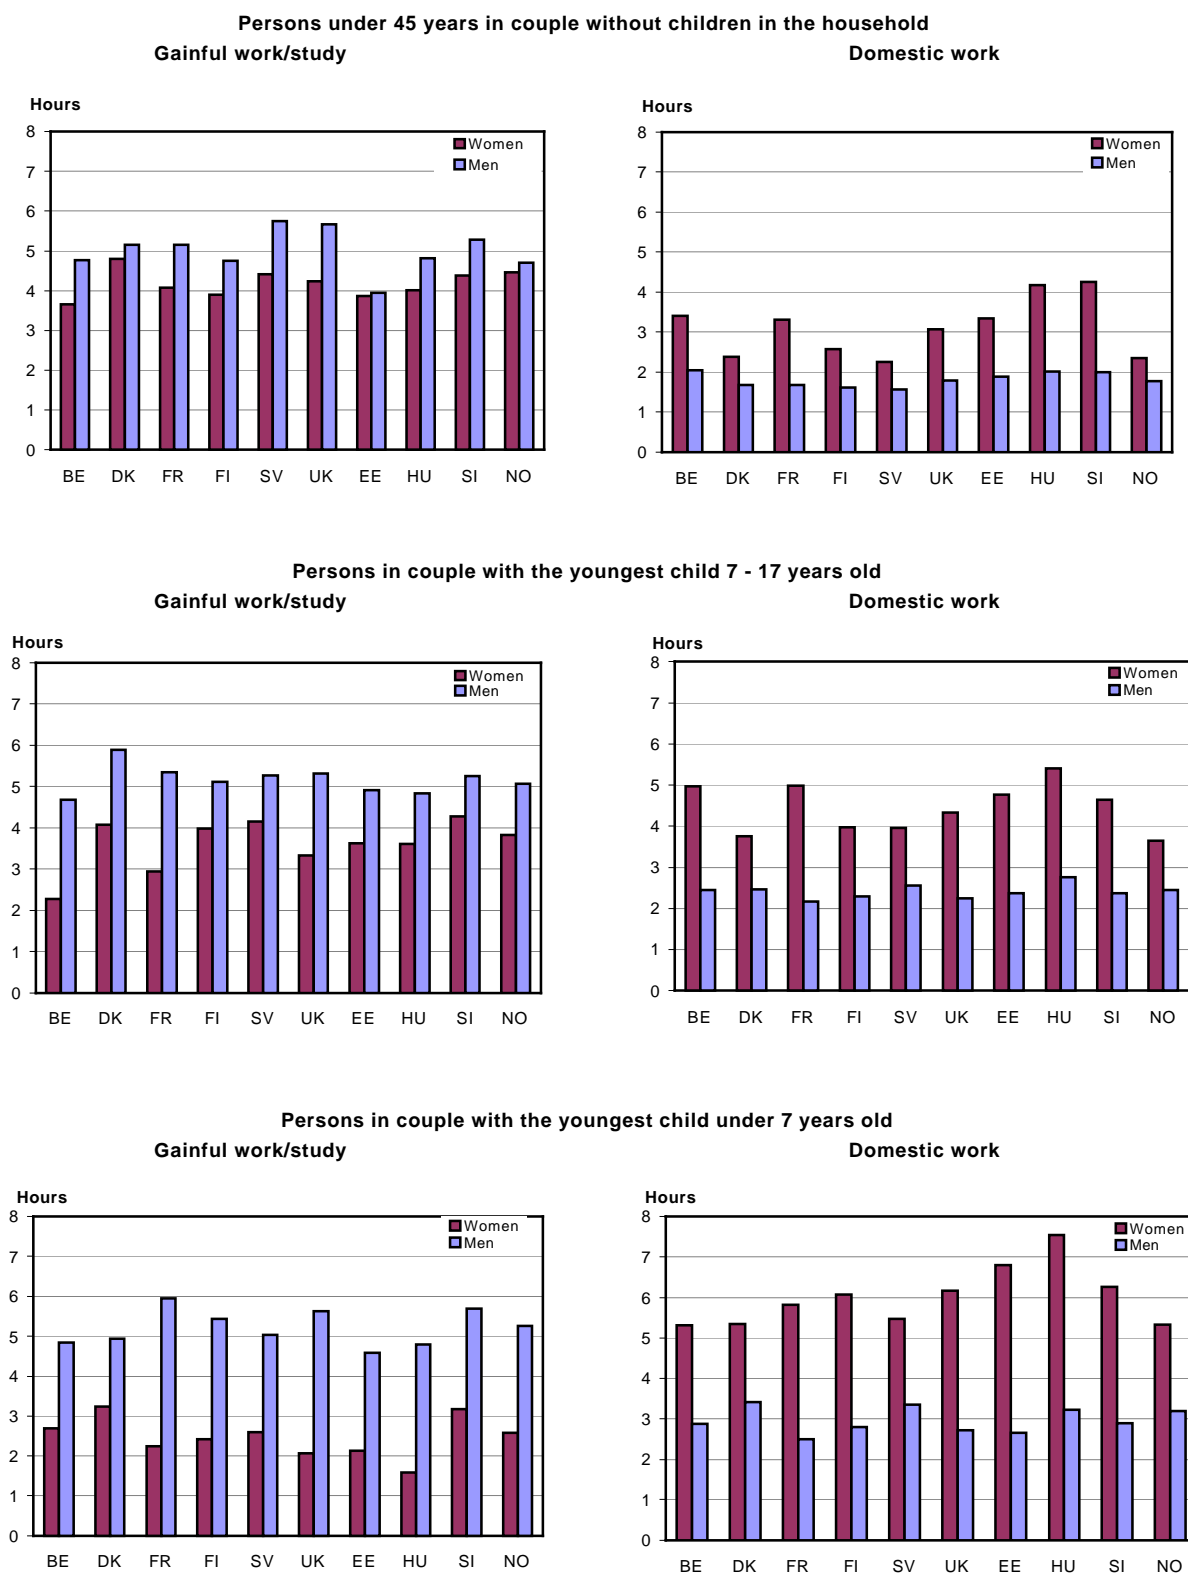

The household structure and in particular the presence of children is closely linked to time use, see Figure 5. In particular, for women and men in couples, the allocation of the time between gainful work/study and domestic activities (including parental) is different if there are children in the household. This difference is even more pronounced when the children are young (below 7 years). Note that the grouping is done according to the age of the youngest child. In the group where the youngest child is below 7 years, it is very probable that there are more small children in the household.

For women in couples, the average time for gainful work/study is often less when there are children in the household and even less when there is at least one child below 7 years. The difference between women in couples without children and women in couples with the youngest child 7 – 17 years is more than one hour per day in Belgium and France, while the difference is very small or none at all in Slovenia, Estonia, Sweden and Finland. If the youngest child is less than 7 years the difference is between 1½ and 2 hours per day in most countries. The difference is larger than 2 hours in Hungary and the United Kingdom.

In contrast, there is a clear tendency that the time for domestic work is longer if women have children and even longer when the children are small. Then the time for domestic work is between 5½ and 7½ hours per day, depending on country. In the absence of children, the time spent on gainful work/study is higher than on domestic tasks in all countries except Hungary. This starts to be reversed for the majority of the countries when the youngest child in the household is 7 to 17 years, except in Denmark, Sweden, Norway and Finland. When the youngest child is under 7 years, women devote on average more time to domestic work than to gainful work/study in all the countries, between 6 hours more in Hungary and just over 2 hours more in Denmark. This is, in fact, due to lower employment rates for women with children.

For men in couples, the pattern is not quite as clear, see Figure 5. Regarding the domestic time (including parental time) the tendency is the same as for women. It increases when they are in a household with children and even more when the children are small, in particular in Denmark, Sweden and Norway. Regarding the time of gainful work/study of men in couples, it is slightly higher or remains almost stable for those who have children.

For men as well as for women, the total work time, the time spent on gainful work and on domestic tasks, is higher when there are children in the household and even higher when the children are young in most countries. The differences in total time of work of men and women in couples with small children are large in Estonia, Slovenia and Hungary where total working time of women remains about 1 hour higher than those of men.

Employed persons (hours min)	7:43	2:39	4:56	00:05	2:44	00:09	1:14	0:50	1:47	0:30	1:17	0:29	00:02	:	2216	1370

Notes:

People aged 16-74 years are included in the tables.

Data were collected during the period March, April, September and October 2001.

The ILO definition of employment has been applied.

Data for groups with few observations are not included. The symbol ".." has been used as notation for these data.

The symbol ":" means that data are not available

Table 1 Time use of population and employed persons respectively

Country FRANCE

Average time in activities in minutes

	Sleep	Unspec pers care, eating, other pers care	Employment and travel as part of work	Study	Household and family care	Volunteer work	Participatory activities, Social life and Entertainme nt and Culturee	Resting- time out, Sports and outdoor act, Hobbies and games, Unspec leisure	TV and video	Other mass media	Travel excl travel as part of work of which travel to/from work	Filling in TUS diary and Other unspec	Number of persons in the population domain	Number of diaries in the domain (in the sample)	Number of persons in the domain (in the sample)	
	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Whole population (h: min)	9:03	3:01	2:34	0:30	3:17	0:13	0:55	0:53	2:07	0:29	0:55	0:16	0:03	47231212	15441	16005
Employed persons (h:min)	8:30	2:57	5:10	0:02	2:41	0:10	0:45	0:39	1:36	0:19	1:08	0:34	0:03	22556983	7535	7750

Notes:

Data for groups with few observations (less than 50 persons) are not included. The symbol ".." have been used as notation for these data.

Results calculated on a small number of observations are shaded.

People aged 15 years and above are included in the tables.

Data were collected during the period February 1998 - February 1999. No parts of the year were excluded.

The ILO definition of employment has not been applied meaning that persons with very few working hours may not be included as employed.

The underestimation is very small.

Percentage of doers can be calculated as number of doers divided by total number of diaries of the corresponding group

Employed persons (hours min)	08:22	02:20	04:18	00:10	02:32	00:09	01:40	00:53	01:35	00:31	01:09	00:30	00:18	:	6741	963

Notes:

Persons aged 12 years and above are included in the tables.

Data were collected during October 2000, using a precoded 7 week diary format. See www.tijdsbesteding.nl for details (in English).

The ILO definition of employment has been used.

Data for groups with few observations are not included. The symbol ".." has been used as notation for these data.

The symbol " : " means that data are not available

Source: SCP, Social and Cultural Planning Office, www.scp.nl

In the Netherlands there are at present two surveys of Time Use conducted:

by the Social and Cultural Planning Office (1975-2000, to be repeated in 2005) and by Statistics Netherlands (1997, 1999, 2001, repetition as yet uncertain).

Table 1 Time use of population and employed persons respectively

Country NORWAY

Average time in activities in hours and minutes

	Sleep	Unspec pers care, eating, other pers care	Employment and travel as part of work	Study	Household and family care	Volunteer work	Participatory activities, Social life and Entertainme nt and Culturee	Resting- time out, Sports and outdoor act, Hobbies and games, Unspec leisure	TV and video	Other mass media	Travel excl travel as part of work of which travel to/from work	Filling in TUS diary and Other unspec	Number of persons in the population domain	Number of diaries in the domain (in the sample)	Number of persons in the domain (in the sample)	
	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Whole population (hours, min)	08:15	01:54	02:59	00:36	02:42	00:09	02:02	01:18	01:57	00:44	01:15	00:19	00:08	3674171	6687	:
Employed persons (hours min)	08:00	01:46	04:23	00:15	02:43	00:08	01:58	01:00	01:44	00:36	01:21	00:28	00:07	2424640	4390	:

Notes:

Persons aged 10-79 years are included in the tables.

Data were collected during the period February 2000 - February 2001. No parts of the year were excluded.

The ILO definition of employment has been used.

The symbol ":" means that data are not available

Data for groups with few observations are not included. The symbol "." has been used as notation for these data.

Number of persons in the population domain is based on the basis of the weights.

The software used to produce the tables has been SAS .

Lack of comparability to HETUS:

Coffe/tea-drinking and conversations while on visits or having visitors, which is a natural part of the visit, is coded as "visiting/receiving visitors".

In the examples of how to fill in the diary, "conversation" is a bit mores stressed as a main activity than in the HETUS examples.

These differences may lead to some more "social life" and a bit less eating in the Norwegian results than in the HETUS results.

Notes:

The symbol : means that data are not available

Data for groups with few observations are not included. The symbol ".." has been used as notation for these data.

People aged 10 years and above are included in the tables.

Data were collected during the period March 1999 - February 2000. No parts of the year were excluded.

The ILO definition of employment has been applied.

The software used to produce the tables has been SAS .

Notes:

People aged 20-84 years are included in the tables.

Data were collected during the period October 2000-October 2001. No parts of the year were excluded.

The ILO definition of employment has been applied.

The symbol ":" means that data are not available

Data for groups with few observations are not included. The symbol "." has been used as notation for these data.

Numbers in column "Number of persons in the population domain" are estimates based on data from the Swedish Survey on Living Conditions and the Swedish population register. The Swedish Labour Force Survey has been used to determine percentages in each group that are employed (see notes to tables 4 and 5).

95% confidence intervals are supplied for all estimates.

The software used to produce the tables has been SAS .

Notes:

Estimates based on few observations are omitted. This is denoted by ..

A 95% confidence interval is provided for each estimate.

"Number of persons in the population domain" are estimates based on data from different sources.

The Swedish Survey on Living Conditions and the swedish population register have been used to estimate the number of people in different life cycle groups.

The Swedish Labour Force Survey has been used to determine percentages of different groups that are employed.

The number of employed persons in each group has been calculated as the estimated number in the group times the percentage employed.

The "Number of persons in the population domain" for "All employed women" applies to people aged 20-64 years.

Notes:

Persons aged 8 years and above are included in the tables.
 Data were collected during the period June 2000 - September 2001.
 The ILO definition of employment has been used.

Data for groups with few observations are not included. The symbol ".." has been used as notation for these data.
 The symbol " : " means that data are not available
 Diaries with fewer than 5 episodes were excluded
 Diaries with more than 90 minutes unspecified time were excluded

The software used to produce the tables has been SPSS .

Standard deviations - these assume a SIMPLE sample design, rather than the actual COMPLEX (ie stratified & clustered) design.

The UK data will be reweighted to revised population totals based on the 2001 census, in May 2003.

Table 1 Time use of population and employed persons respectively

Country ESTONIA

Average time in activities in hours and minutes

	Sleep	Unspec pers care, eating, other pers care	Employment and travel as part of work	Study	Household and family care	Volunteer work	Participatory activities, Social life and Entertainment and Culturee	Resting-time out, Sports and outdoor act, Hobbies and games, Unspec leisure	TV and video	Other mass media	Travel excl travel as part of work	of which travel to/from work	Filling in TUS diary and Other unspec	Number of persons in the population domain	Number of diaries in the domain (in the sample)	Number of persons in the domain (in the sample)
	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Whole population (hours, min)	08:49	02:11	02:22	00:30	03:32	00:14	00:50	01:04	02:27	00:49	01:07	00:16	00:05	1290045	11437	5728
Employed persons (hours min)	08:23	02:09	04:32	00:05	03:08	00:12	00:44	00:39	02:09	00:39	01:15	00:29	00:05	350316	5556	2784

Notes:

People aged 10 years and above are included in the tables.

Data were collected during the period April 1999 - March 2000. No parts of the year were excluded.

The ILO definition of employment has been applied.

The symbol ":" means that data are not available

Data for groups with few observations are not included. The symbol ".." has been used as notation for these data.

Table 1 Time use of population and employed persons respectively

Country HUNGARY

Average time in activities in hours and minutes

	Sleep	Unspec pers care, eating, other pers care	Employment and travel as part of work	Study	Household and family care	Volunteer work	Participatory activities, Social life and Entertainment and Culturee	Resting-time out, Sports and outdoor act, Hobbies and games, Uspec leisure	TV and video	Other mass media	Travel excl travel as part of work	of which travel to/from work	Filling in TUS diary and Other unspec	Number of persons in the population domain	Number of diaries in the domain (in the sample)	Number of persons in the domain (in the sample)
	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Whole population (hours, min)	08:43	02:24	02:33	00:30	03:39	00:10	00:51	00:56	02:44	00:29	00:56	00:17	00:00	8,206,149	43,142	11,421
Employed persons (hours min)	08:12	02:25	04:59	00:06	02:56	00:08	00:45	00:39	02:15	00:23	01:06	00:33	00:00	4,011,174	20,032	5,265

Notes:

People aged 15 - 84 years are included in the tables.

Data were collected during the period September 1999 - September 2000. No parts of the year were excluded.

The ILO definition of employment has been applied.

The symbol ":" means that data are not available

Data for groups with few observations are not included. The symbol ".." has been used as notation for these data.

The software used to produce the tables has been SPSS .

Notes:

Data for groups with few observations are not included. The symbol "." has been used as notation for these data.
The symbol : means that data are not available

Persons aged 10 years and above are included in the tables.
Data were collected during the period August - September 2000.
The ILO definition of employment has been used.
The software used to produce the tables has been VisualFoxPro

Notes:

Data for groups with few observations are not included. The symbol ".." has been used as notation for these data.

The symbol : means that data are not available

Persons aged 10 years and above are included in the tables.

Data were collected during the period April 2000 - March 2001. No parts of the year were excluded.

The ILO definition of employment has been used.

The software used to produce the tables has been SAS .

3. Methodological Notes

Data, classification and definitions

Data originate from the national Time Use Surveys (TUS), countries and sources, see below. In TUS a representative sample of individuals has completed a diary during one weekday and one week-end day distributed over the whole year. One has to bear in mind that the results are estimates and that sampling errors affect the results. For small groups of individuals the errors are larger.

The activities have been coded and most countries have followed the Harmonised European Time Use (HETUS) activity coding list. The sampled persons have also answered questions related to the individual and to the household. The activity codes have been grouped into eleven major activities, see below, and the questionnaires have been used to classify the persons according to a life cycle variable with 11 categories. Basic tables have been produced on activities by lifecycle, employment and sex, which show average time per day and participation rate.

Main activities for the tables in this publication are shown in the following table:

Main activity	Activity
Sleep	Sleep
Meals and personal care	Eating, unspecified personal care and other personal care
Gainful work/study	Employment, travel as part of work and study
Domestic work	Household work and family care
Volunteer work	Volunteer work and informal help to other households
Free time	
Socializing	Participatory activities, social life and entertainment and culture
Leisure time	Sports and outdoor activities, hobbies and games, unspecified leisure time and resting
TV, video	TV and video
Radio, music, reading	Other mass media
Travel	Travel excluding travel as part of work
Unspecified activities	Other, unspecified and filling in TUS diary

Lifecycle

Person less than 25 years, no children less than 18 years, living with parents
 Person 25 - 44 years, no children less than 18 years, living with parents
 Person less than 45 years, living in couple, no children less than 18 years
 Person less than 45 years, no children less than 18 years, living in another arrangement
 Single parent (all ages), youngest child less than 18 years
 Person (all ages), living in couple, youngest child 0 - 6 years
 Person (all ages), living in couple, youngest child 7 - 17 years
 Person 45 - 64 years, living in couple, no children less than 18 years
 Person 45 - 64 years, no children less than 18 years, living in another arrangement
 Person 65 years and above, living in couple, no children less than 18 years
 Person 65 years and above, no children less than 18 years, living in another arrangement
