

## Harmonized Indices of Consumer Prices May 2002

The rate of inflation for the euro-zone\*, as measured by the Monetary Union Index of Consumer Prices (MUICP), was 2.0% comparing May 2002 with May 2001. The MUICP is the average of the HICPs for the euro-zone Member States. The euro-zone is treated as an entity regardless of its composition.

The annual rate of change for the euro-zone fell from 2.4% to 2.0% between April and May 2002. A year ago, in May 2001, the corresponding rate was 3.3%.

The rate of inflation in the EU, as measured by the European Index of Consumer Prices (EICP=EU-15), fell from 2.2% to 1.8% between April and May 2002. A year ago, in May 2001, the corresponding rate was 3.0%.

EU Member States with the lowest inflation rates in May 2002 were the United Kingdom (0.8%), Germany (1.0%) and Luxembourg (1.3%). Highest inflation rates were reported for Ireland (5.0%), Greece and the Netherlands (3.8% each).

The annual rate of inflation for the European Economic Area (EEA) fell from 2.2% to 1.8% between April and May 2002. A year ago, in May 2001, the corresponding rate was 3.1%. The annual rate of change fell from 1.1% in April to 0.6% in May 2002 in Switzerland\*\* and from 1.6% in April to 1.2% in May 2002 in the USA\*\*. (No May 2002 data available for Japan\*\* in time for publication).

The inflation rates for the euro-zone, the EU and the USA\*\* from May 2001 to May 2002 and for Japan\*\* from May 2001 to April 2002 are shown in the graph below:

\* The euro-zone comprises: Belgium, Germany, Greece (from January 2001), Spain, France, Ireland, Italy, Luxembourg, the Netherlands, Austria, Portugal and Finland.

\*\* For the USA, Japan and Switzerland the national CPIs are given, which are not strictly comparable with the HICPs.

## ➤ METHODOLOGICAL NOTES

*Harmonized Indices of Consumer Prices* (HICPs) are produced and published monthly. They are central indicators for ESCBs/ECBs single monetary policy for the euro-zone as they form the basis of the Monetary Union Index of Consumer Prices (MUICP). HICPs provide the best statistical basis for international comparisons of consumer price inflation in the European perspective. HICPs cover virtually all areas of household final monetary consumption expenditure (HFMCE).

The relative distribution of consumers' expenditure on individual products varies from country to country. Hence, there is no *uniform basket* applying to all Member States. Owner occupiers' shelter costs, where expressed as imputed rents or mortgage interest payments, are not regarded as part of the inflationary process and hence excluded.

The weights used in the compilation of HICPs may relate to a reference period up to seven years prior to the current year. However, adjustments must be made each year for especially large changes in the expenditure pattern. This minimises disparities arising from different up-date frequencies.

In order to keep HICPs broadly in step with each other and up-to-date in terms of market developments, new products must be included when they achieve a significant relative importance. HICPs must be shown to be based on appropriate sampling procedures, taking into account the national diversity of products and prices. The samples must be kept well up-to-date, in particular by banning the practice whereby *missing* prices are simply assumed to be equal to the last observed prices. In order to measure *pure* price changes, the prices included in HICPs need to be adjusted for changes in the quality of products. Certain inappropriate practices, such as *automatic linking*, have been ruled out in this context. Furthermore, HICPs have to be compiled using specified formulae.

The analysis of sources of inflationary pressure requires a sub-division of HICPs into component parts relating to different product groups. About 100 sub-indices and weights published by Eurostat are based on COICOP/HICP, a version of the international *Classification Of Individual CO*nsumption *by Purpose* adapted for HICPs.

The MUICP is calculated as a weighted average of the euro-zone regardless of its composition. The index is computed as an annual chain index allowing for country weights to change each year as well as allowing for inclusion of additional countries into the euro-zone. The country weight of a Member State is its share of HFMCE in the euro-zone total. Expenditure expressed in the former national currencies is converted into euro using the irrevocably locked conversion rates. The country weights used are based on national accounts data referring to the year ending two calendar years prior to the current year. They are updated to December prices of the latest calendar year prior to the current one.

The European Index of Consumer Prices (EICP) is calculated as an annual chain index for the 15 EU Member States up to 1998. Starting in 1999, the MUICP is treated as a single entity within the EICP. The European Economic Area Index of Consumer Prices (EEAICP) further includes Iceland and Norway. Country weights for the EICP and EEAICP are derived from the value of HFMCE in national currencies (including the euro for the euro-zone) converted into purchasing power standards (PPS). The euro-zone "country weight" reflects its share in the EU and EEA totals.

Greece is included in the MUICP starting with the January 2001 index. The annual rate of change for the MUICP of each current month in 2001 is the change from the corresponding month in 2000 to December 2000 for the eleven euro-zone countries combined with the change from December 2000 to the current month of 2001 for the twelve euro-zone countries. In other words, the euro-zone is treated as an entity regardless of its composition. For analytical purposes Eurostat has made available in NewCronos historic series covering the current twelve Member States of the euro-zone.

Although MUICP weights are updated every year, the inflation rate can be decomposed in an additive way into the sum of the effects of the expenditure groups covered by the index. Hence, it is possible to say how much the various item-groups contribute to the total inflation rate. Eurostat has made these time series available in the NewCronos database.

Technical notes on the HICP and MUICP were given in Eurostat news release 21/97 of 5.3.1997, memo 8/98 of 4.5.1998, and memo 2/00 of 18.2.2000. Further details can be obtained from the 'Compendium of HICP reference documents', Catalogue number 2/2001/B/5.

## Order form

I would like to subscribe to Statistics in focus (from 1.1.2002 to 31.12.2002):  
 (for the Data Shop and sales office addresses see above)

**Formula 1:** All 9 themes (approximately 180 issues)

Paper: EUR 360  
 Language required:  DE  EN  FR

**Formula 2:** One or more of the following nine themes:

- Theme 1 'General statistics'
  - Theme 6 'External trade'
  - Theme 7 'Transport'
  - Theme 9 'Science and technology'
  - Paper: EUR 42
  - Theme 2 'Economy and finance'
  - Theme 3 'Population and social conditions'
  - Theme 4 'Industry, trade and services'
  - Theme 5 'Agriculture and fisheries'
  - Theme 8 'Environment and energy'
  - Paper: EUR 84
- Language required:  DE  EN  FR

Statistics in focus can be downloaded (pdf file) free of charge from the Eurostat web site. You only need to register. For other solutions, contact your Data Shop.

- Please send me a free copy of 'Eurostat mini-guide' (catalogue containing a selection of Eurostat products and services)  
 Language required:  DE  EN  FR
- I would like a free subscription to 'Statistical References', the information letter on Eurostat products and services  
 Language required:  DE  EN  FR
- Mr  Mrs  Ms
