

Farm structure in Ireland – 2005

Half of the farms specialised in cattle rearing and fattening

*This Statistics in Focus is part of a series of country-specific publications on the results of the Farm Structure Survey (FSS) 2005. It provides a brief but nevertheless comprehensive insight into the farm structure in Ireland.**

* * *

In June 2005 in Ireland, about **125.5 thousand** agricultural holdings** had an economic size of at least 1 European Size Unit (ESU).

- These holdings employed 148 thousand AWUs (annual work units), the equivalent of 148 thousand persons working full time;
- they made use of about 4.2 million ha of agricultural area, which is on average **33.2 ha per holding**.

Among these 125.5 thousand agricultural holdings

- 35% made use of less than one AWU, while 15% made use of 2 or more AWUs;
- 5% used less than 5 ha agricultural area, while 3% used 100 ha or more;
- 50% were holdings of the type specialised cattle rearing and fattening, 24% various grazing livestock (including sheep), 17% were specialist dairy farming, 2% specialist cereals, oil seed and protein crops and 2% were engaged in combined field cropping and grazing livestock;
- 68% of their agricultural area was situated in less favoured or mountain areas;
- 1% were organic farms;
- 40% benefited from direct investment aid.

Among the 125.3 thousand sole holders

- 10% were women;
- 48% were aged 55 or more, and only 8% were younger than 35 years;
- 26% had another gainful activity as their major occupation.

Table 5 – Subsistence farming.7

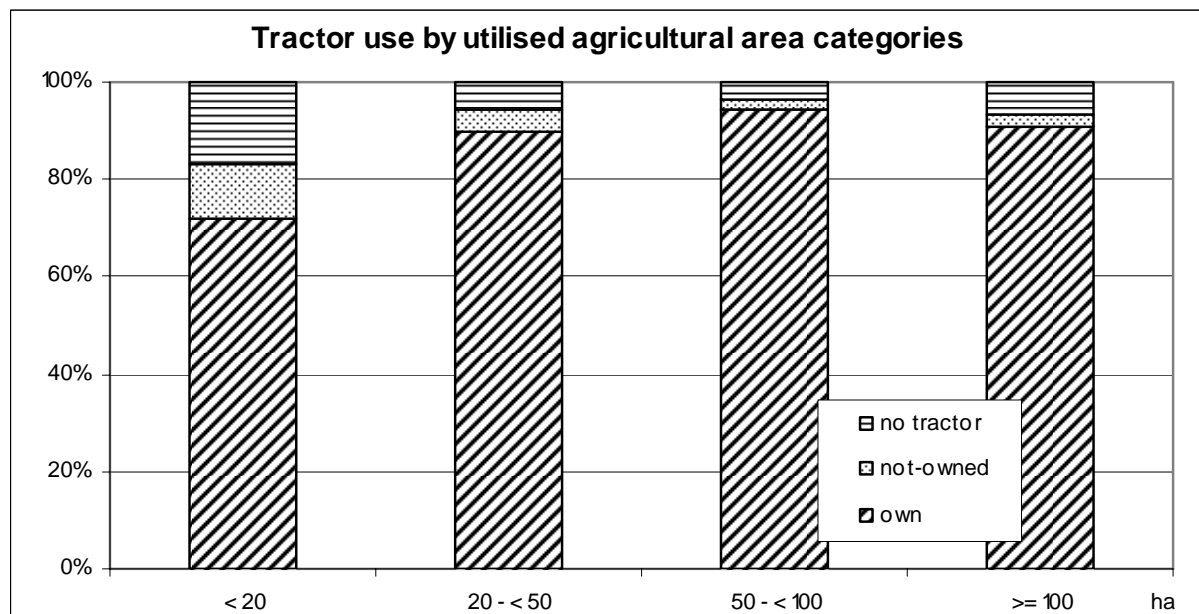

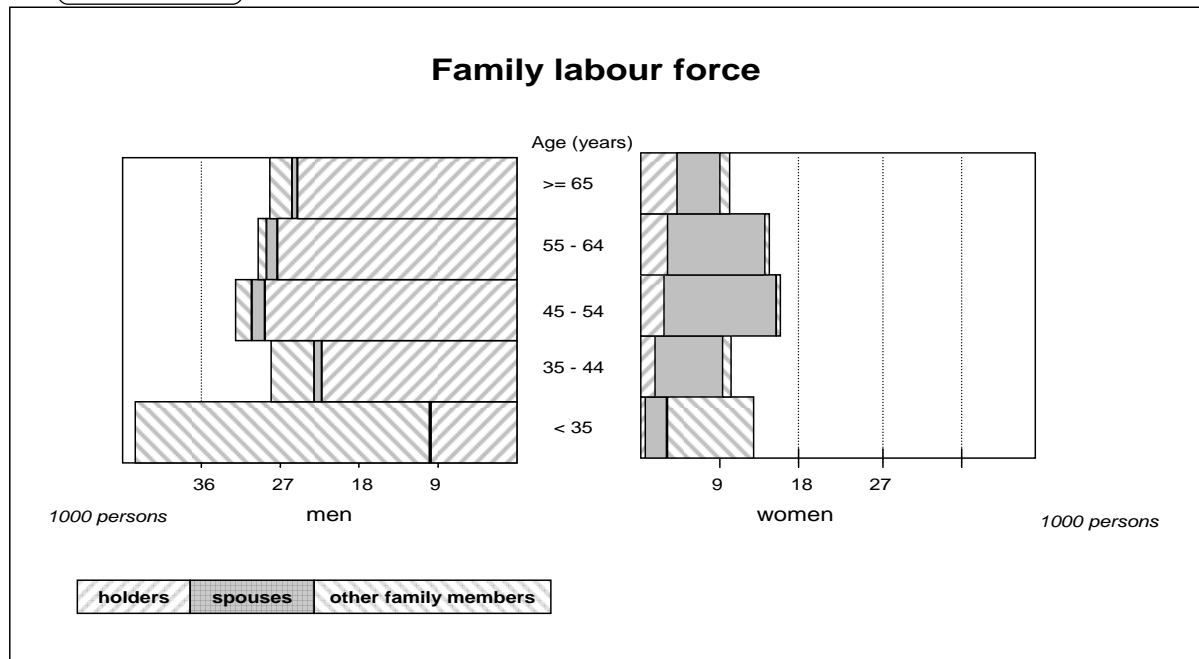

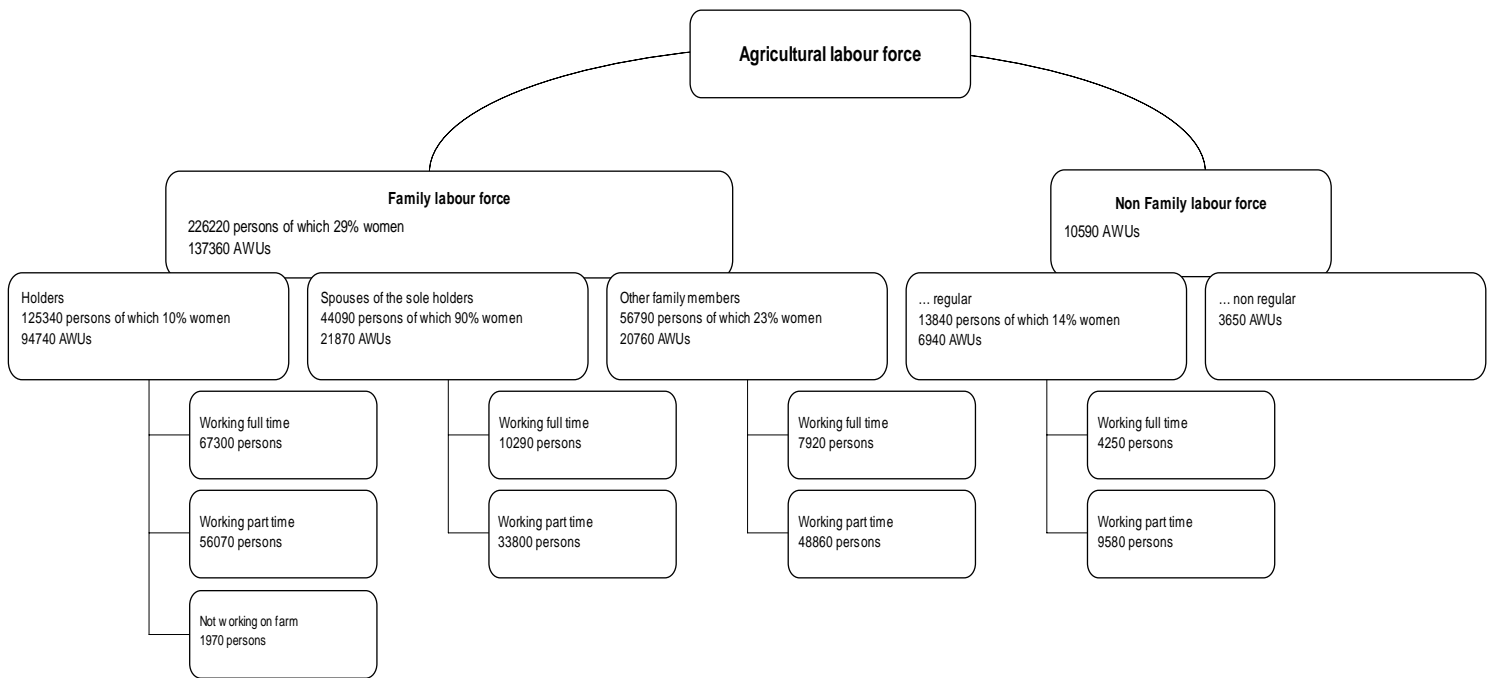

* A similar publication was issued in December 2004 presenting the results of the FSS 2003 in Ireland, however due to methodological changes the results of the FSS 2003 are not comparable with those ones of the recent publication on FSS 2005.

** Due to differences in the threshold across Member States, the total number of farms is not comparable between countries. This is why the present analysis, including Tables 1-4 and the graphs focus on holdings of at least one ESU. See methodological notes for more information on the concept of the ESU.

Ireland 2005 – Holdings of at least 1 ESU

► METHODOLOGICAL NOTES

The survey on the structure of agricultural holdings in Ireland was carried out on a sample base using the reference date of 1st June 2005. The previous full-scope census was executed in 2000. The FSS 2005 was conducted on a voluntary basis.

The target population was all the active farms in Ireland regardless of any thresholds, due to the fact that certain characteristics (e.g. goats, sheep) could be underestimated otherwise. However returned questionnaires of farm having less than 1 ha UAA or 1 LU or not having specialised activity were excluded later from the estimations.

The basis for sampling was the periodically updated farm register (based on the census 2000 and administrative information). The sample of 85,000 units was composed of 3 sub-samples: active farms surveyed in June 2004, active farms surveyed in FSS 2003, as well as other farms. For the latter sub-sample the target population was stratified into 10 strata. Units within the strata of specialised pig or poultry holdings not chosen from the 2003-2004 populations – due to their significance – were included exhaustively, as well as holdings with 100 ESU or more and new holdings. From the remaining units stratified by UAA the sampling rate was determined by using Neymann-allocation with 100% selection of holdings of at least 100 ha. During the selection procedure, the units with the longest time interval since last being surveyed were picked first.

A population frame, stratified by agricultural area used, was drawn up using the farm register adjusted for changes in size classes using the survey returns. Specialist strata e.g. for larger pig and poultry units were also used. Initial grossing factors for each stratum were determined using the ratio of the number of returned questionnaires in the stratum to the total number of holdings in the stratum. A further process of post-stratification adjustment was then conducted. This process divided certain strata into sub-strata based on the number of livestock in various categories or on the area of cereals. This process ensured that account was taken of separately calculated matched sample results.

For each activity ('enterprise') on a farm (for instance wheat, dairy cow or vineyard), a **standard gross margin (SGM)** is estimated, based on the area (or the number of heads) and a regional coefficient. The sum of such margins in a farm is its **economic size**, expressed in **European Size Units (ESU)**. 1 ESU is equal to 1200 euros.

Each farm is classified in the community typology by its economic size and its **type of farming**, depending on the share of each enterprise in its economic size. For instance, a farm where breeding sows account for more than 2/3 of the economic size, is classified as *specialist pig rearing* (type 5011). Depending on the level of aggregation, farms are grouped into 8 to 70 types.

Annual work unit (AWU) is equivalent to a worker employed on a full time basis for one year. In Ireland it is 1800 hours (225 working days of 8 working hours per day).

Livestock Unit (LU) is equivalent to a dairy cow. The number of animals (number of heads) is converted into LU using a set of coefficients reflecting the feed requirements of the different animal categories.

Subsistence farming refers here to all farms below 1 ESU economic size. Note that the number of farms cannot be compared between countries due to the differences in coverage of FSS.

European Statistical Data Support:

Eurostat set up with the members of the 'European statistical system' a network of support centres, which will exist in nearly all Member States as well as in some EFTA countries.

Their mission is to provide help and guidance to Internet users of European statistical data.

Contact details for this support network can be found on our Internet site: <http://ec.europa.eu/eurostat/>

A list of worldwide sales outlets is available at the:
Office for Official Publications of the European Communities.
