

Farm structure in Austria – 2005

One-third of the holders are women

This Statistics in Focus is part of a series of country-specific publications on the results of the Farm Structure Survey (FSS) 2005. It provides a brief but nevertheless comprehensive insight into the farm structure in Austria. A similar publication was issued in August 2005 presenting the results of the FSS 2003 in Austria.

* * *

In December 2005 in Austria, about **137 thousand*** agricultural holdings had an economic size of at least 1 European Size Unit (ESU).

- These holdings employed 152.3 thousand AWUs (annual work units), the equivalent of 152.3 thousand persons working full time;
- they made use of about 2.7 million ha of agricultural area, which is on average **19.6 ha per holding** (compared to 19.3 ha in 2003).

Among these 137 thousand agricultural holdings

- 44% made use of less than one AWU, while 12% made use of 2 or more AWUs;
- 22% used less than 5 ha agricultural area, while 1% used 100 ha or more;
- 27% were holdings of the type specialist dairy farming, 12% specialist cereals, oil seed and protein crops, 11% were engaged in cattle rearing and fattening, 9% had dairy farming with cattle rearing and fattening and 9% were specialist vineyard holdings;
- 61% of their agricultural area was situated in less favoured or mountain areas;
- 13% were organic farms;
- 20% benefited from direct investment aid.

Among the 136.4 thousand sole holders

- 33% were women;
- 25% were aged 55 or more, and 12% were younger than 35 years;
- 19% had another gainful activity as their major occupation.

Table 1 – Labour force by size of the farms.....3

Table 2 – Agricultural holdings by size.....4

Table 3 – Land use by size of the farms.....5

Table 4 – Livestock by size of the farms.....6

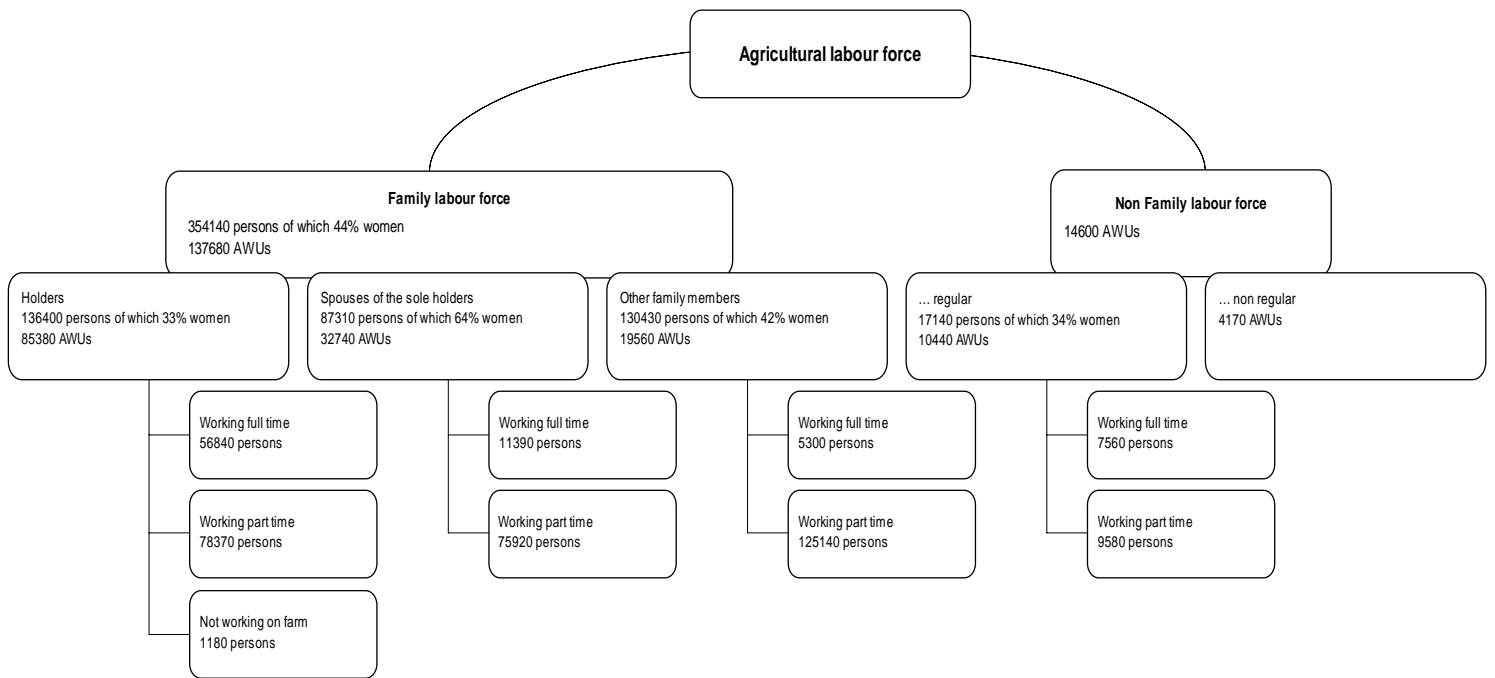

Table 5 – Subsistence farming.7

Due to differences in the threshold across Member States, the total number of farms is not comparable between countries. This is why the present analysis, including Tables 1-4 and the graphs focus on holdings of at least one ESU. See methodological notes for more information on the concept of the ESU.

Austria 2005 – Holdings of at least 1 ESU

| Size of the farms | Agricultural area (ha) | | | | All farms | Livestock (LU*) | | | |

*) Holdings which have fodder areas without livestock (e.g. Almgemeinschaft) are included.

► METHODOLOGICAL NOTES

The survey on the structure of agricultural holdings in Austria was carried out in December 2005 on a sample basis. The last full-scale agricultural census was conducted in 1999. The reference date of the farm structure survey 2005 was 1st December 2005. However for labour force characteristics the reference period was the preceding 12 months; for area-related characteristics the crop year 2005; and for poultry: the day preceding the last emptying between 1st November and 1st December 2005. Information was taken from administrative sources, like IACS, the cattle register and the agri-environmental program (ÖPUL).

The target population consisted of all operating agricultural and forestry holdings in the farm register updated with newly established units. An agriculture and forestry holding is a single unit, both technically and economically, which has a single management and which produces agricultural and forestry products (but may provide also non-agricultural products and services). Only holdings which exceeded certain thresholds (e.g. 1 ha UAA, 25 ares vineyard, 3 cattle, 5 pigs, etc.) were taken into account. Holdings in the target population were classified into 8-16 strata in each province using a combination of total area and arable land, or based on livestock population, intensive labour force input or significant permanent crop areas. Strata with large farms had higher sampling rates. The total number of holdings in the sample is 40 thousand.

For each activity ('enterprise') on a farm (for instance wheat, dairy cow or vineyard), a **standard gross margin (SGM)** is estimated, based on the area (or the number of heads) and a regional coefficient. The sum of such margins in a farm is its **economic size**, expressed in **European Size Units (ESU)**. 1 ESU is equal to 1200 euros.

Each farm is classified in the community typology by its economic size and its **type of farming**, depending on the share of each enterprise in its economic size. For instance, a farm where breeding sows account for more than 2/3 of the economic size, is classified as *specialist pig rearing* (type 5011). Depending on the level of aggregation, farms are grouped into 8 to 70 types.

Annual work unit (AWU) is equivalent to a worker employed on a full time basis for one year. In Austria it is 2000 hours (250 working days of 8 working hours per day).

Livestock Unit (LU) is equivalent to a dairy cow. The number of animals (number of heads) is converted into LU using a set of coefficients reflecting the feed requirements of the different animal categories.

Subsistence farming refers here to all farms below 1 ESU economic size (holdings which have fodder areas without livestock (e.g. Almgemeinschaft) are included). Note that the number of farms cannot be compared between countries due to the differences in coverage of FSS.

European Statistical Data Support:

Eurostat set up with the members of the 'European statistical system' a network of support centres, which will exist in nearly all Member States as well as in some EFTA countries.

Their mission is to provide help and guidance to Internet users of European statistical data.

Contact details for this support network can be found on our Internet site: <http://ec.europa.eu/eurostat/>

A list of worldwide sales outlets is available at the:
Office for Official Publications of the European Communities.
