### ➤ METHODOLOGICAL NOTES

The National Institute of Statistics, in collaboration with Academy of Agricultural and Forestry Sciences, the Ministry of Agriculture and Rural Development, the Ministry of Interior and Administrative Reform and the 42 county statistical offices implemented the survey on the structure of agricultural holdings in Romania. The FSS 2007 was the second sample survey after the General Agricultural Census in 2002 (GAC 2002). The reference period was the 2006/2007 crop year, in the case of the livestock data the reference date was 31 December and for the labour force queries the 2007 calendar year.

The target population was all the agricultural holdings (regardless of their size and production), which totalled 4.48 million holdings of which 4.46 were individual holdings and the remaining were legal units. No sampling thresholds were applied. These holdings were gathered in the Statistical Farm Register that was updated with statistical and administrative sources.

The legal units were surveyed exhaustively, and the individual holdings were sampled using the Neyman stratified random sampling method. The stratification included 42 counties, 11 ESU economic classes, 9 typology classes, and 7 classes of UAA. Altogether 354 742 holdings were chosen for the sample (a sampling rate of 8%).

The questionnaires were completed between 10 January and 10 February 2008 in a large statistical operation that involved 6 944 field operators in face to face interviews. The response rate was 96%.

For some cases of non-response, imputation was employed using data from another holding of the same stratum with a complete questionnaire.

Between FSS 2005 and 2007 "maintaining land in good agricultural and environmental conditions" (GAEC) became an agricultural activity and the concerned land has been included in the agricultural area. In Romania it covers close to 644 900 ha, 75% in holdings with at least 1 ESU.

For each activity ('enterprise') on a farm (for instance wheat, dairy cow or vineyard), a Standard Gross Margin (SGM) is estimated, based on the area (or the number of heads) and a regional coefficient. The sum of such margins in a farm is its economic size, expressed in European Size Units (ESU, 1 ESU is a 1200-euro SGM).

An Annual work unit (AWU) is equivalent to a worker employed on a full time basis for one year. In Romania it is 1960 hours (245 working days of 8 working hours per day).

A Livestock Unit (LSU) is equivalent to a dairy cow. The number of animals (number of heads) is converted into LSU using a set of coefficients reflecting the feed requirements of the different animal categories.

### **European Statistical Data Support:**

Eurostat set up with the members of the 'European statistical system' a network of support centres, which will exist in nearly all Member States as well as in some EFTA countries.

Their mission is to provide help and guidance to Internet users of European statistical data.

Contact details for this support network can be found on our Internet site:
