Comments

1. Euro area inflation is measured by the MUICP ('Monetary Union Index of Consumer Prices' as defined in Council Regulation (EC) No 2494/95 of 23 October 1995) which is the official euro area aggregate. The euro area initially included Belgium, Germany, Ireland, Spain, France, Italy, Luxembourg, the Netherlands, Austria, Portugal and Finland. Greece was included from January 2001, Slovenia from January 2007, Cyprus and Malta from January 2008 and Slovakia from January 2009. New Member States are integrated into the MUICP using a chain index formula.
2. EU inflation is measured by the EICP ('European Index of Consumer Prices' as defined in Council Regulation (EC) No 2494/95 of 23 October 1995) which is the official EU aggregate. The EU included 15 Member States until April 2004, 25 Member States from May 2004 until December 2006 and 27 Member States from January 2007. New Member States are integrated into the EICP using a chain index formula.
3. Data for the United Kingdom for December 2009 were not available in time for publication. Due to this fact, EU and EEA totals were calculated using Eurostat estimates.
4. EEA inflation is measured by the EEAICP ('European Economic Area Index of Consumer'). It is computed using data for Iceland and Norway in addition to the EU Member States.

Methodology

Measures of inflation

The *annual rate* measures the price change between the current month and the same month of the previous year. This measure is responsive to recent changes in price levels but can be influenced by one-off effects in either month.

The *12-month average rate* overcomes this volatility by comparing average Harmonized Indices of Consumer Prices (HICPs) in the latest 12 months to the average of the previous 12 months. This measure is less sensitive to transient changes in prices.

HICPs designed for international comparison

Harmonized Indices of Consumer Prices (HICPs) are harmonized inflation figures required under Article 121 of the Treaty of Amsterdam (109j of the Treaty on European Union). They are designed for international comparison of consumer price inflation. The focus is on quality and comparability among the indices of different countries as well as on their relative movements.

The MUICP is used by, among others, the European Central Bank (ECB) as a main indicator for monetary policy management for the euro area (see [ECB press release](#), 8 May 2003).

The Member States' HICPs are supplied by the National Statistical Institutes; the MUICP, EICP and EEAICP are compiled by Eurostat. The HICP is computed as an annual chain index allowing weights to be changed each year. HICP aggregates are calculated as weighted averages of the HICPs using the weights of the countries and sub-indices concerned. The weight of a country is its share of the household final monetary consumption expenditure in the euro area total. For the MUICP this is expressed in euro, for the EICP and the EEAICP it is expressed in purchasing power standards. The MUICP is treated as a single entity within the EICP and EEAICP starting from 1999.

Additional information

About 100 MUICP, EICP, EEAICP and HICP sub-indices and over 30 special aggregates with corresponding weights and inflation rates are available in Eurostat's database:
