Regional differences in per capita GDP – Five outstanding regions.....2

Figure 1: Gross domestic product (GDP) per capita 1999 - level 2

According to the most recent estimates, taking into account the 1997-1999 average, per capita GDP in purchasing power standards (PPS) in 52 of the 56 level 2 regions of the Candidate Countries was below 75% of an average including EU Member States and the 10 Candidate Countries named in the presidency conclusions of the Laeken summit. Per capita GDP ranged from 3 871 PPS (21% of this average) for the Romanian region of Nord-Est to 19 902 PPS (108 % of this average) for Bratislavský in Slovakia and 24 730 PPS (134 % of this average) for Praha in the Czech Republic. Compared to the average of the current EU, per capita GDP ranged between 18 % and 122 %.

Regional differences in per capita GDP – Five outstanding regions

The latest Eurostat estimates of regional per capita GDP in purchasing power standards (PPS) for the Candidate Countries for 1997-1999 show some regional differences and highlight five outstanding regions. In an otherwise relatively uniform distribution, the Czech region of Praha averaged 24 730 PPS and the Slovak region of Bratislavský 19 902 PPS, equal to 134 % and 108 % of an average that would result from the EU's enlargement to include the 10 countries⁽¹⁾ named in the presidency conclusion of the Laeken summit as candidates for the next enlargement round. Cyprus and Közép-Magyarország, the capital region of Hungary, are also above 75 % of the average. Slightly below 75 % comes Slovenia (74 %).

Table 1: Gross domestic product (GDP) per capita 1997-1999, level 2

Again making use of this average, four regions range above 75 %, 12 between 50 % and 75 %, 21 between 35 % and 50 % and 19 below 35 %.

Out of the 12 regions between 50% and 75 %, seven are located within the Czech Republic. The remaining five are Slovenia (74 %), two regions of Hungary (Nyugat Dunántúl and Közép-Dunántúl with 59 % and 51 % of the average, respectively), the Polish capital region of Mazowieckie (61 %) and Malta.

All Bulgarian and Romanian regions, except Bucuresti, range below 35 % of the average.

In terms of the development of per capita GDP in relation to the average over the years 1997 to 1999, it is striking that most of the capital regions are catching up. Especially in Bulgaria, Czech Republic, Hungary and Poland, the value for 1999 lies significantly above the 1997-1999 average. This indicates strong development focused on the economic centres.

Some countries show huge regional GDP differences, e.g. the regional GDP of Praha is 2.5 times higher than the figure for Středni Čechy, the poorest region of the Czech Republic. Bratislavský is separated by a similar gap from Východné Slovensko, the poorest region of Slovakia.

The Baltic countries, considered here as single level 2 regions, range from 31 % of the average in Latvia to 37 % in Lithuania and 41 % in Estonia.

For Turkey, no regional breakdown has yet been agreed, and therefore the national figure (31 %) is displayed.

➤ ESSENTIAL INFORMATION – METHODOLOGICAL NOTES

At the level 2 regional breakdown considered in this publication, there are 56 regions in the candidate countries. The data presented in the annexed table represent the year 1999 and the average 1997-1999; individual years and figures at a level 3 regional breakdown (200 regions) are available on request from the Eurostat Data Shop network.

The data presented in this publication were supplied by the candidate countries to Eurostat in December 2001. National level figures were provided by Eurostat national candidate countries division and reflect the situation in January 2002.

GDP is not synonymous with income available to private households, because commuter flows into regions increase the regional GDP of those regions.

The candidate countries data are for most of the countries almost fully in line with EU standards. Intensive co-operation between Eurostat and the candidate countries over recent years makes reasonable comparisons between the candidate countries and the EU Member States possible. There are still some weaknesses of candidate countries basic statistics.

The methodology to estimate regional GDP is the same as for EU countries and based on the European System of Accounts (ESA95) and on a corresponding Eurostat document: "Regional accounts methods: Gross value-added and gross fixed capital formation by activity".

¹ Cyprus, Czech Republic, Estonia, Hungary, Lithuania, Latvia, Malta, Poland, Slovenia, Slovakia (AC10 = 10 Accession Countries).
