# Latest developments for the production index of total industry (excluding construction)

during the third quarter of 2002

*Carmen Lipp-Lingua*

After two successive quarters of growth in total industrial production (excluding construction) in the EU, there was almost no change in output in the third quarter of 2002. The EU and euro-zone<sup>1</sup> production indices fell by 0.1% (compared to the quarter before).

On the basis of a comparison with the same quarter of a year before, industrial output in the EU was 0.9% lower, while the corresponding figure for the euro-zone was also down by 0.6%.

Figure 1: Production index for total industry (excluding construction), seasonally adjusted data, growth rates, compared to the previous quarter (%)

Table 1: Production index for total industry (excluding construction), growth rates (%)

<sup>1</sup> Euro-zone data up to the end of 2000 cover eleven Member States (B, D, E, F, IRL, I, L, NL, A, P and FIN); with Greece's entry into the euro-zone from the beginning of 2001, they cover twelve Member States.

## Production index for the main industrial groupings and total industry (excluding construction)

Looking in more detail at the breakdown of output between the different main industrial groupings (MIGs), there was a clear split in performance. On the one hand, there was quarter on quarter growth in the EU for intermediate goods (0.5%), capital goods (0.4%) and consumer durables (0.2%) in the third quarter of 2002. As such, both intermediate and capital goods recorded their third successive quarters of expanding output in the EU. However, consumer durables (-0.6%) and particularly energy (-1.6%) saw their output fall at a more rapid pace in the EU during the third quarter of 2002.

On the basis of a comparison with the same quarter of a year before, intermediate goods was the only MIG able to report in the third quarter of 2002 an expansion in output in both zones (up by 0.7% in the EU and 0.8% in the euro-zone).

Table 2: Production index for the MIGs, growth rates (%)

Between the second and third quarters of 2002, total industrial production expanded by more than 1% in Belgium and Spain, while the same was true for Luxembourg and Austria between the first and second quarters of 2002. Belgium and Germany both recorded successive quarter on quarter gains in industrial output during the first three quarters of 2002.

Table 13: Production index for machinery and equipment (1995=100)

<sup>1</sup> Q/Q-1 on the basis of a seasonally adjusted series; Q/Q-4 on the basis of a working day adjusted series.

## ➤ ESSENTIAL INFORMATION – METHODOLOGICAL NOTES

**Growth rates for the euro-zone** are shown with the euro-zone treated as a single entity. As such, growth rates before the first quarter of 2001 compare on the basis of eleven countries, whilst growth rates from the first quarter of 2001 onwards compare on the basis of twelve countries.

The **legal basis** for the production index is the **Council Regulation No 1165/98** of 19 May 1998 concerning short-term statistics<sup>1</sup> (STS-R), which is currently in the process of implementation.

The **production index** is an important business cycle indicator which shows the monthly activity of the industrial sector, which is the one of the most volatile components of the economy.

**The coverage of the production index** according to the STS-R includes all activities listed in Sections C to E (mining and quarrying, manufacturing, and electricity, gas and water supply) of the NACE Rev. 1<sup>2</sup> classification, except Division 41 (collection, purification and distribution of water) and Group 40.3 (steam and hot water supply).

### Definition

As specified in the STS-R, and in line with traditional practice in business statistics, **the production index should show the evolution of value added at factor cost**, at constant prices. Value added at factor cost can be calculated from turnover (excluding VAT), plus capitalised production, plus other operating income, plus or minus the

changes in stocks, minus the purchases of goods and services, minus other taxes on products and taxes linked to production.

This index of production should take account of:

- variations in type and quality of the commodities and of the input materials;
- changes in stocks of finished goods and work in progress;
- changes in technical input-output relations (processing techniques) and;
- services such as the assembling of production units, mounting, installations, repairs, planning, engineering, creation of software.

The observation unit for this index is the kind-of-activity unit, though, for enterprises with few persons employed in secondary activities, the local unit or the enterprise may be used as a proxy.

### Data transmission and calculation method

Data should be transmitted to Eurostat for the Main Industrial Groupings (MIGs) and at the 2-digit level of NACE Rev. 1 by all Member States. For Section D (manufacturing), data shall be transmitted at the 3-digit and 4-digit levels by those Member States whose total value added for this Section represents more than 5% of the European Community total. The data are used to produce aggregated indicators for the Community as a whole, and for the group of Member States participating in the euro-zone.

The **reference period** for the production index is a calendar month. **Data should be transmitted to Eurostat no later than 1 month and 15 days** after the end of the reference period. This deadline may, however, be extended by up to 15 calendar days for those Member States whose value added in Sections C, D and E of NACE Rev. 1 in a given base year represents less than 3% of the European Community total.

The **weights** used for the production index are based on information from the Structural Business Statistics database or information coming directly from the Member States. **Eurostat uses gross value added at factor cost to calculate the weights.** Weights and the base year are revised every five years. **The current base year is 1995.**

**Member States should transmit a working day adjusted index.** They may also transmit seasonally adjusted and trend-cycle indices. If data are not transmitted in these forms, Eurostat produces the adjusted figures.

For **the calculation of** the euro-zone and the EU-15 **seasonally adjusted aggregates**, Eurostat aggregates working day adjusted data from Member States in order to compile a working day adjusted euro-zone and EU-15 series. Seasonally adjusted euro-zone and EU-15 series are then **produced using the TRAMO & SEATS method.** For these reasons, the euro-zone and EU-15 seasonally adjusted growth rates might differ from the weighted growth rates of the individual Member States.

### Dissemination

Eurostat publishes detailed data and time series in Theme 4/EBT-domain of NewCronos.

# Order form

I would like to subscribe to Statistics in focus (from 1.1.2002 to 31.12.2002):  
 (for the Data Shop and sales office addresses see above)

**Formula 1:** All 9 themes (approximately 180 issues)  
 Paper: EUR 360  
 Language required:  DE  EN  FR

**Formula 2:** One or more of the following nine themes:  
 Theme 1 'General statistics'  
 Theme 6 'External trade'  
 Theme 7 'Transport'  
 Theme 9 'Science and technology'  
 Paper: EUR 42  
 Theme 2 'Economy and finance'  
 Theme 3 'Population and social conditions'  
 Theme 4 'Industry, trade and services'  
 Theme 5 'Agriculture and fisheries'  
 Theme 8 'Environment and energy'  
 Paper: EUR 84  
 Language required:  DE  EN  FR

Statistics in focus can be downloaded (pdf file) free of charge from the Eurostat web site. You only need to register. For other solutions, contact your Data Shop.

Please send me a free copy of 'Eurostat mini-guide' (catalogue containing a selection of Eurostat products and services)  
 Language required:  DE  EN  FR  
 I would like a free subscription to 'Statistical References', the information letter on Eurostat products and services  
 Language required:  DE  EN  FR
