

Agricultural price trends for EU-15 in March 2004¹

Agricultural output prices for EU15 in March 2004, 2.8% higher, in real terms, than previous year's level²

- The price index for *Crop products* as a whole for March (+5.7%) was higher than in the same month of 2003, in line with what happened in the last ten months. This increase surpasses the one observed in the previous month (+4.2%) mostly due to a lower decline of the price of *Vegetables and horticultural products* marked by a -7.9% compared to -13.5% for February. *Fruits and Wine* with a rate of change of -1.4% and -3.1% were the other two products showing a negative sign. All the other groups recorded growth, especially for *Cereals* (+29.9%) and *Olive oil* (+15.8%). The *Other crop products* price index showed also a considerable increase (+7.8%), in relation to the one observed in February (+2.7%)
- The overall price index for *Animals and animal products* remained at the same level than in March 2003. Separately, each of the two groups shows an opposite evolution: the index for *Animals* shows an increase of 2.4% and for *Animal products* a decrease of 3.2%. For *Animals*, the price went up for all the components, except *Cattle* (-1.0%). The most significant increase was for the price of *Pigs* (+7.5%), which contrasts with the decline observed in February (-3.1%). On the contrary, for *Animal products*, *Other animal products* is the only product with a price index higher (+5.7%) than a year before. As it happened along the last year (except for July), the price of *Milk* fell whereas *Eggs* shows a negative sign (-1.8%) for the first time in the last twelve months.
- Output prices went down in two of the EU-15 Member States (see Table 2) where Portugal appears with a decrease of 6.4%. From the thirteen Member States which recorded output price increases, the highest rate (+14.0%) was recorded for Belgium and the lowest for Italy (+0.4%).

¹ Eurostat and the Member States are rebasing the agricultural price indices from 1995=100 to 2000=100 and all indices in this report are now expressed on the new base. Due to the difficulties associated with this change of base and the new codification, there is a lack of data for some Member States, above all for the new Members. Eurostat has made ad hoc calculations for some of the old Member States (further details may be found in the methodological notes of this report) and plans to provide data for EU-25 in January 2005.

² Unless otherwise stated, all index changes referred to in this Statistics in Focus are in real (deflated) terms.

Agricultural output prices for EU15 in March 2004, 2.8% higher, in real terms, than previous year's level 1

EU15-Input prices, in real terms, 2.1% higher in March 2004 compared to March 2003..... 2

Agricultural terms of trade in March 2004, 0.7% higher than previous year's level..... 2

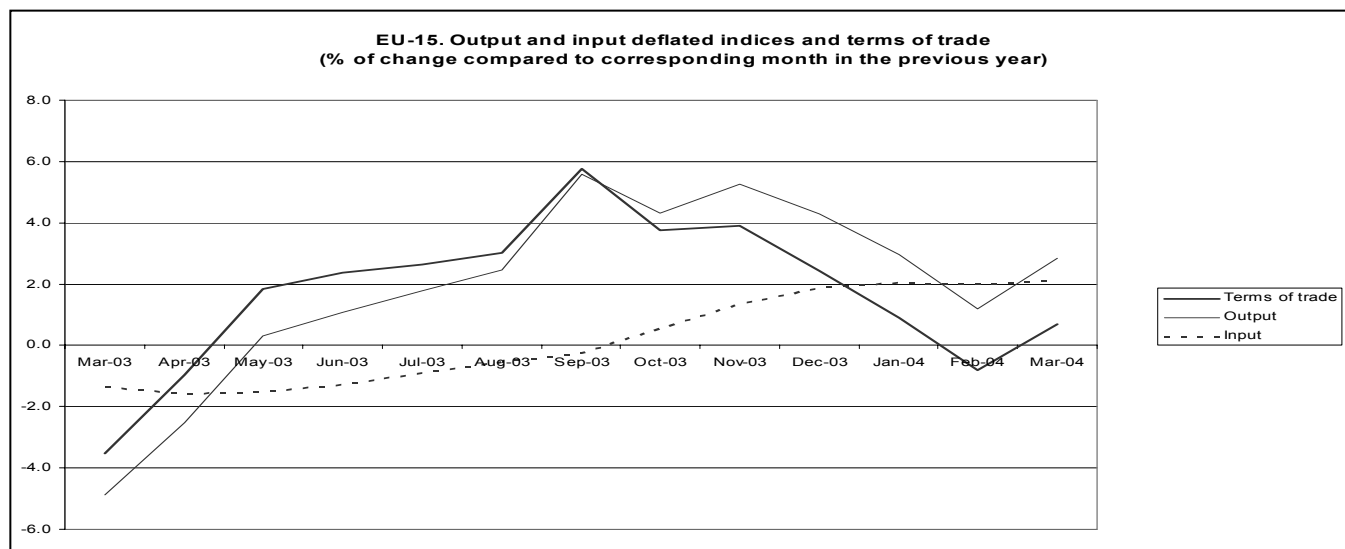

EU15 - Input prices, in real terms, 2.1% higher in March 2004 compared to March 2003

- Continuing the tendency that began in October of 2003, the price index for *Goods and services currently consumed in agriculture* (input 1) increased by 2.8%. This rise was mainly due to higher prices for *Fertilisers and soil improvers* (+4.3%), *Animal feedingstuffs* (+9.3%) and *Maintenance of materials* (+2.8%). As it happened in February, *Energy; Lubricants* (-8.5%) and *Plant protection products and pesticides* (-0.7%) show a lower price than the previous year's level.
- The price index for *Goods and services contributing to agricultural investment* (input 2) remains the same than a year before.
- Across the EU15 Member States (see table 3) input price indices ranged from -1.5% in Luxembourg to +7.3 in the United Kingdom.

Agricultural terms of trade in March 2004, 0.7% higher than previous year's level

- The agricultural terms of trade, calculated by dividing the real output price index by the real input price index, moved similarly to the output index in the last twelve months, with a minimum in March 2003 (-3.5%) and a maximum in September 2003 (+5.8%).
- By Member States, the annual rate of change in March shows increases in eleven countries ranging from +0.8% for Germany to +15.1% for Belgium. The remaining countries recorded decreases between -0.7% in Sweden to -9.0% in Portugal.

➤ ESSENTIAL INFORMATION – METHODOLOGICAL NOTES

Purpose of the Agricultural Price Indices (API): to provide information on trends in producer prices of agricultural products and purchase prices of the means of agricultural production. It is used the concept of *Market price* (or *producer price* in the context of agricultural accounts) which is defined as the price received by the producer *without* the deduction of taxes or levies (except deductible VAT) and *without* the inclusion of subsidies.

Base period: This concept is involved in the calculation of a price index, (i) in determining the weights for each product in the field of observation (*weighting year*) and (ii) in determining the base prices for these products. Furthermore, the term *base year* is also used when it is referred to the year for which the index is fixed at level 100. The base for the agricultural indices is changed every five years with effect from 1970. So a rebasing is done for the years ending in "0" and in "5".

The five-yearly rebasing comprises three major changes:

(i) change of the base year; in the current rebasing this base year is 2000;

(ii) change of the weighting coefficients to adapt them to changes which have taken place in the last few years in the structure of European agricultural production and in the production techniques. With the rebasing of the EU API to the base 1995=100, the methodology of EU API was adapted in order to be closer in line with the new accounts methodology. In the current rebasing (2000=100) the same methodology is applied but the general structure of the EU output and input indices, i.e. the list of groups, subgroups, classes, subclasses and categories for which partial indices should be calculated, was changed;

(iii) update of the data used in order to account for changes in the markets;

Calculation of national indices: The EU Agricultural Price Indices are calculated by each Member State on the basis of the Laspeyres formula with base and reference year 2000.

The value weight attached to each elementary index in the output index is equal to the value of the sales of this product (exclusive of VAT) over the base period.

Means of production have to be valued at the purchase price which is the price the purchaser actually pays for the products. *It includes taxes less subsidies on products (but excludes deductible taxes like deductible VAT).*

The index is expressed in the form of the weighted average of the elementary indices with fixed base weights. The weights used are values (of sales or purchases) and not quantities. In the case of highly seasonal products as fresh fruits and fresh vegetables the method of variable baskets with fixed monthly weights in the base year is used for the monthly indices. Thus each Member State determines 12 monthly baskets of representative products. For each of the two groups (fresh fruits and fresh vegetables), each Member State determines 12 monthly baskets of representative products.

Calculation of indices for EU: for this purpose the following steps should be applied:

(i) Estimation of the API for the European Monetary Union (EMU) with the national weights.

(ii) Conversion of the EMU weight and weights of the non-EMU Member States into Purchasing Power Standards (PPS);

(iii) Calculation of the API for the EU with the PPS weights

Availability of data and Eurostat estimations: When writing these notes the following information was available in Eurostat:

Weights: For EU-15, weights for the new rebasing are available for all the countries except for Germany, Italy and Portugal.

For calculating the weights for EU-15, Eurostat has decided to make an estimation of these weights from the Agriculture Economic Accounts. In order to allow for homogeneity, this estimation was performed for all the countries, even for the ones that weights are available.

Indices: In the new base, price indices for year 2004 are available for all the countries except for Germany, Italy and Portugal for output and input and Spain for input. Besides, for the period 2000-2003 indices in the new base are missing for some countries.

Eurostat has recalculated the monthly indices in the new base for those countries for which indices are not available for 2004 and also, in order to be able of calculating the yearly rates of change, the indices for 2003.

Journalists can contact the media support service:

Bech Building Office A4/017 • L-2920 Luxembourg • Tel. (352) 4301 33408 • Fax (352) 4301 35349 •

E-mail: eurostat-mediasupport@cec.eu.int

European Statistical Data Support:

Eurostat set up with the members of the 'European statistical system' a network of support centres, which will exist in nearly all Member States as well as in some EFTA countries.

Their mission is to provide help and guidance to Internet users of European statistical data.

The complete details concerning this support network can be found on our Internet site: www.europa.eu.int/comm/eurostat/

A list of worldwide sales outlets is available at the:

Office for Official Publications of the European Communities.
