Per capita GDP below 75% of the EU average in 50 of the 211 EU regions

Axel Behrens

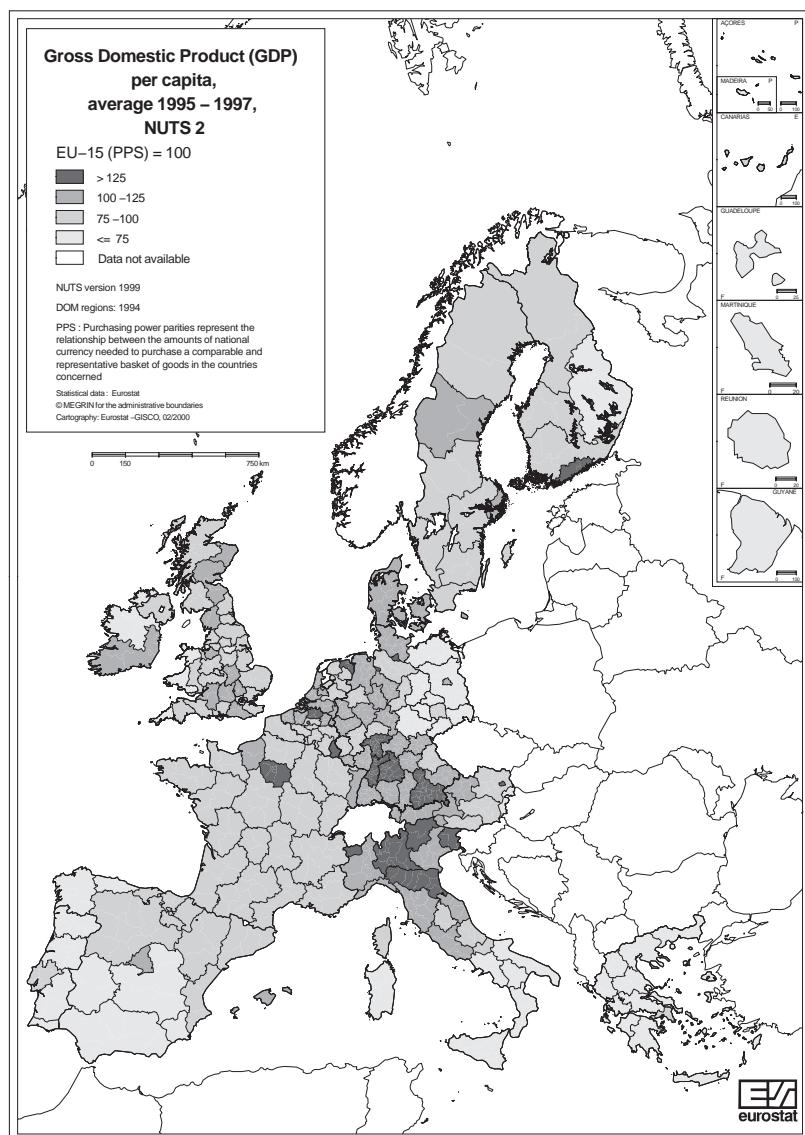

Figure 1 : Gross Domestic Product (GDP) per capita, average 1995-1997, NUTS 2

According to the most recent estimates, for the period 1995 to 1997, average per capita GDP in purchasing power standards (PPS) in 50 of the 211 NUTS-2 regions of the European Union was below 75% of the EU average of 18 463 PPS. Per capita GDP varied between 7 946 PPS (43% of the EU average) for the Greek region of Ipeiros and 42 351 PPS (229% of the EU average) for Inner London in the United Kingdom. For the first time these estimates are based on the new European System of Accounts, ESA95.

Major regional differences in per capita GDP

According to the latest estimates of regional per capita GDP (in PPS) for the period 1995 to 1997, the average for these three years in the 211 regions observed ranged between 7 946 PPS in the Greek region of Ipeiros and 42 351 PPS in Inner London. This means that the figures for the regions with the lowest and highest per capita GDP differed by a factor of five: 43% and 229% respectively of the EU average of 18 463 PPS.

If we disregard the four French overseas départements (which we shall do from now on because of the absence of recent data), per capita GDP in Ipeiros was well below that in any other region. The second-lowest average for the three years was 9 200 PPS (50% of the EU average) in the Portuguese region of Açores. Regions with a similar low per capita GDP were Voreio Aigaio in Greece and Extremadura in Spain (51% and 54% of the EU average respectively).

During the period under review, there were 46 other regions whose per capita GDP (in PPS) was below 75% of the EU average, including twelve of the thirteen Greek regions and six of Portugal's seven. The figure for one Spanish region, Asturias, was near to the 75% threshold, while in Portugal, the figure for Lisboa e Vale do Tejo was well above it. The other regions were mainly in Germany (eight in the new *Bundesländer*, but not including East Berlin), Spain (7) and Italy (six, all in the south). There was one in Austria (Burgenland), one in Ireland (Border, Midland and Western), one in Finland (Itä-Suomi), and four in the United Kingdom (Cornwall & Isles of Scilly, West Wales & The Valleys, Merseyside, and South Yorkshire).

In 1996, 68 million people lived in these 46 regions, 18% of the EU's total population.

Table 1: The regions of the EU with the highest/lowest GDP per capita (in PPS), average 1995 to 1997

(¹) without French overseas department

Inner London is the region with by far the highest per capita GDP over the three-year period. Regions such as Hamburg, Darmstadt and Oberbayern in Germany, the Grand Duchy of Luxembourg, the Belgium capital Bruxelles or Wien in Austria are some way behind, although none of them is below 160% of the EU average (see Table 1). Commuter flows are significant factors in all of these regions except Darmstadt, which includes Frankfurt am Main. (See also the methodological notes at the end).

Major differences within Member States

In six of the 13 Member States with NUTS-2 regions, the highest average regional per capita GDP for the period 1995 to 1997 was double the lowest. Examples include Belgium (Bruxelles: 170% of the EU average, Hainaut: 80%), France (Ile-de-France: 156%, Languedoc-Roussillon: 77%), Italy (Lombardia: 133%, Calabria: 60%) and Austria (Wien: 166%, Burgenland: 71%). There were, however, two countries with much more pronounced regional differences (Germany and the United Kingdom). In Sweden, the lowest and highest figures (93% in Östra Mellansverige and 123% in

Stockholm) did not differ very greatly.

In Germany, the value for Hamburg (198%) was more than three times higher of the value for Chemnitz: 61%. If we disregard Inner London, as it is a special case, and take the region with the second-highest figure (125%, in North Eastern Scotland), the United Kingdom is no different to most other Member States. This effect is absent in Germany, where the figure for the District of Darmstadt (167%) is not far below that for Hamburg (198%).

Some three-year averages are very different from the figures for 1997

If we compare the averages for the period 1995-1997 with the figures for 1997, we see that the three-year averages do not always accurately reflect the latest situation. In 55 of the regions observed, the difference between the two was 2 percentage points or more. In 9 of these 55, the average value was above the figure for 1997, which indicates that economic growth in these regions was lagging behind the EU average. It is striking that all of the regions concerned, apart from two German regions, Berlin (2.6 percentage points) and Saarland (2.1 percentage points), are situated in France (including the region with the highest value: Ile-de-France with 3.4 percentage points).

In the other 46 regions, the average for the three years

was below the 1997 figure, which suggests it paints too negative a picture of the latest developments. There were much bigger differences here (up to 7 percentage points). Again, it is interesting to note that these regions are concentrated in one Member State: no fewer than 31 of the 46 regions were in the United Kingdom, and in Hampshire & Isle of Wight, and in Gloucestershire, Wiltshire & North Somerset, the figures for 1997 differed most from the three-year averages in the United Kingdom (by 5.9 and 5.8 percentage points respectively). It should be pointed out that both Irish regions are represented in this group, where Southern and Eastern has the biggest difference of all the regions (7 percentage points).

ESSENTIAL INFORMATION – METHODOLOGICAL NOTES

1. Estimation procedure

National GDP data are provided by the national statistical offices in accordance with the rules of the European System of Accounts (ESA95). National figures are divided up between the regions according to regional shares of national gross value added, in principle at factor cost but in some Member States market prices have to be used. In some cases the regional structures are still based on ESA79. This inconsistency will disappear soon as all Member States will provide regional figures according to ESA95.

Estimates of GDP are generally based on the structures of gross value added at factor cost for the respective years. However, these data were not available for all Member States and regions at the time of calculation. In such cases, it is assumed that the regional structure was unchanged.

2. Interpreting the data

GDP and thus per capita GDP are indicators of a country's or region's output and are thus a way of measuring and comparing the degree of economic development of countries or regions. It should be borne in mind that GDP is not synonymous with the income ultimately available to private households resident in a country or region. GDP or per capita GDP cannot therefore be used to make statements such as "Region A is more prosperous than region B".

Commuter flows distort comparisons between countries - and particularly regions - in terms of per capita GDP. Some well-known examples include Luxembourg, city-states such as Hamburg, Bremen and Wien, and the Province of Flevoland in the Netherlands. In the case of city-states, net commuter arrivals generally mean that production in these regions is higher than would be possible with the resident working population. Consequently, per capita GDP tends to overstate productivity in these regions and understate that in the regions where the commuters live. One example of this is Flevoland, many of whose inhabitants are employed elsewhere.

Per capita GDP is also affected by population structure. All other things being equal, regions with a relatively high share of non-working age population - children, pupils/students, retired or with high unemployment - have lower per capita GDPs than regions with relatively low shares of such population groups. The conversion to PPS is based on national purchasing power parities.

The information used to produce these GDP figures are subject to updating as new data are made available to Eurostat.

3. Notes on the tables

When analysing the tables, the reader should bear in mind the following:

- Because of the particular way in which PPS are worked out, the sum of GDP values in PPS for all regions does not tally with the corresponding value for EU-15.

Region	GDP average 95-97 (million ECU)	GDP average 95-97 (million PPS)	GDP per capita average 95-97 (ECU)	GDP per capita average 95-97 (PPS)	GDP per capita average 95-97 (PPS) EU-15=100	GDP per capita 1997 (PPS) EU-15=100

Order form

I would like to subscribe to Statistics in focus (from 1.1.2000 to 31.12.2000):
(for the Data Shop and sales office addresses see above)

Formula 1: All 9 themes (approximately 140 issues)

- Paper: EUR 360
 - PDF: EUR 264
 - Paper + PDF: EUR 432
- Language required: DE EN FR

Formula 2: One or more of the following seven themes:

- Theme 1 'General statistics'
 Paper: EUR 42 PDF: EUR 30 Combined: EUR 54
 - Theme 2 'Economy and finance'
 - Theme 3 'Population and social conditions'
 - Theme 4 'Industry, trade and services'
 - Theme 5 'Agriculture and fisheries'
 - Theme 6 'External trade'
 - Theme 8 'Environment and energy'
 Paper: EUR 84 PDF: EUR 60 Combined: EUR 114
- Language required: DE EN FR

Please send me a free copy of 'Eurostat Mini-Guide' (catalogue containing a selection of Eurostat products and services)
Language required: DE EN FR

I would like a free subscription to 'Statistical References', the information letter on Eurostat products and services
Language required: DE EN FR

Mr Mrs Ms

(Please use block capitals)

Surname: _____ Forename: _____

Company: _____ Department: _____

Function: _____

Address: _____

Post code: _____ Town: _____

Country: _____

Tel.: _____ Fax: _____

E-mail: _____

Payment on receipt of invoice, preferably by:

- Bank transfer
- Visa Eurocard

Card No: _____ Expires on: ____/____

Please confirm your intra-Community VAT number:

If no number is entered, VAT will be automatically applied. Subsequent reimbursement will not be possible.
