

Pig population surveys in November/December 1999 and production forecasts for 2000

Francis Weiler, Robert Poschacher

Pig stocks in the EU begin to decline slowly

The legislation of the EU takes special interests of the member states into account. As a result of this there are different timings of pig surveys. Usually each member country carried out three surveys per year, but the August survey has become very uncomplete, because D, F, I and UK¹ carry out only two surveys per year (also Austria beginning with 2000; see Table 1).

The November/December surveys show the most complete picture. Twelve countries carry out a survey in December, two already in November (D, F) and one in January (DK). According to the November/December 1999 surveys, the total number of pigs in the European Union (EU-15) was 124.3 million, a decrease of 1 million (-0.8 %) over the same period of 1998. This means that the EU-15 holds about 13.6 % of the worldwide pig stocks which was – according to the FAO – 915.3 million in 1999. Since August 1999 the total pig population of the EU decreased by 3.1 million (-2.5 %). When comparing the August and November/December surveys one has to take into consideration that the EU-15 figure of August was estimated by Eurostat due to the fact that the countries D, F, I and UK carry out only two surveys per year (and Austria will follow in 2000). Furthermore it is usual in the EU-15 that the pig population in August is higher than the one at the end of the year. When looking at the surveys in November/December 1997 one sees that the pig herds in 1997 and previous years were much more lower (more than 5 millions lower) than in 1998 and 1999. 1998 was the year in which pig herds were at a record level. This is because pork benefited – like other types of meat – from the BSE crisis in the beef sector. Then, in 1997, the outbreak of the classical swine fever in several member states, in particular in NL, influenced the market very strongly. Supply was reduced by the slaughter of about 10 million animals. Most of the gap caused by the lower supply, mainly from B and NL, was filled by higher production in other EU member states. The recovery of production in NL, which began in the second quarter of 1998, was not, however, accompanied by a corresponding decline in pig herds in the other Member States. Due to this huge pig herds producer prices fell to historical low levels at the end of 1998/beginning of 1999.

In 1999, the five biggest producer countries (D, E, F, NL, DK), which account for 72 % of the total pig population, increased their herds only by 0.34 % compared to 1998 (in 1998 they increased the pig population by 6.6 %): D - 0.5 million (-1.9 %), E +1.04 million (+4.8 %), F +0.13 million (+0.8 %), NL - 0.28 million (-2.1 %) and DK -0.08 million (-0.6 %). Besides D, S, A and UK were the countries which had the major declines in their pig population (S - 0.3 million (-12.9 %), A -0.38 million (-10.0 %), UK -0.52 million (-6.8 %)). E increased its pig stocks by 4.8 % to 22.6 million.

¹ Abbreviations used for the names of the Member States: B = Belgium, DK = Denmark, D = Germany, EL = Greece, E = Spain, F = France, IRL = Ireland, I = Italy, L = Luxembourg, NL = Netherlands, A = Austria, P = Portugal, FIN = Finland, S = Sweden, UK = United Kingdom.

When looking at the different categories one sees that the reduction of boars (-7.9 %), breeding sows not mated (-4.6 %) and piglets (-2.8 %) was much above average (-0.8 %) while the stocks of pigs for fattening (+0.6 %) increased. Therefore one can expect a further reduction of the pig population.

Figure 1: timings of pig surveys in the EU-15

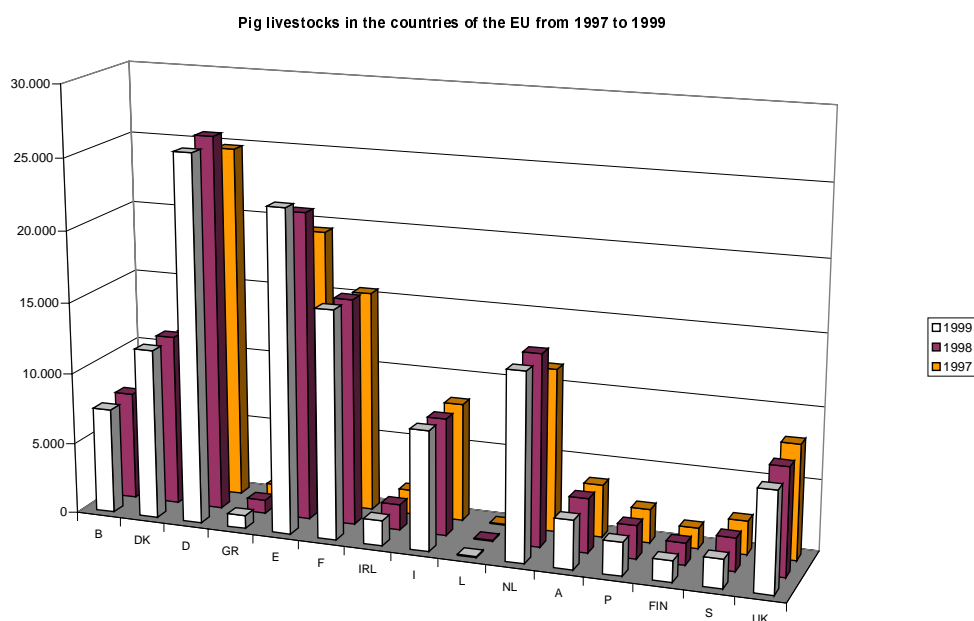

Figure 2

After two years of very high pig production, the year 2000 shows signals for a downturn

Gross Indigenous Production (GIP), which is calculated as a sum of slaughterings and the live pig exports minus the live pig imports, in the EU increased by 8.5 % between 1997 and 1998 and by further 1.8 % between 1998 and 1999, whereas it had been practically unchanged between 1996 and 1997. In 2000 it is expected that the GIP will decline by 1 % to 207.7 million heads. Especially UK (-9.5 %), A (-7.6 %) and S (-6.6 %) will reduce their production. When looking at the big pigmeat producer countries one sees that the production will decline in D (-1.8 %), F (-1.5 %), and NL (-1.3 %) and it will be increased in E (2.4 %) and DK (2.3 %). When looking at the different quarters it can be noted that the GIP will decrease especially in the first and last quarter of the year and that it will be on the level of 1999 in the second and third quarter. Generally it has to be said that the small decline which is currently expected is probably not sufficient to push producer prices quickly back to more profitable levels.

Gross Indigenous Production in the EU-15 from the 1st Quarter 1997 to the 4th Quarter 2000

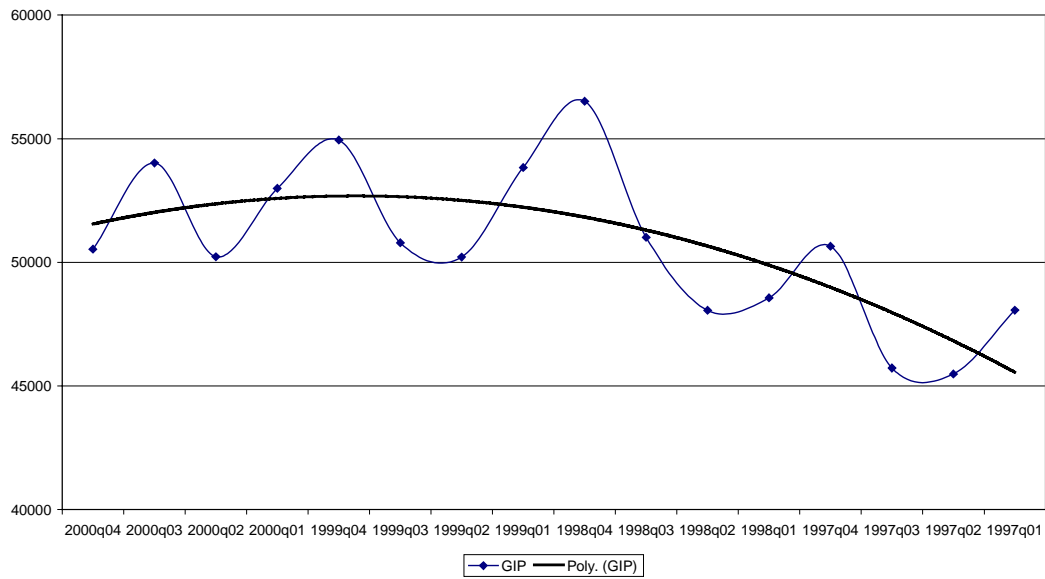

Figure 3

Gross Indigenous Production of the EU member states from 1997 to 2000

Figure 4

When looking at the development of the GIP it can be said that the outbreak of the classical swine fever in NL had a great impact on the market. The gap caused by the lower supply, mainly from B and NL, was filled by higher production in other EU member states. The recovery of production in NL, which began in the second quarter of 1998, was not, however, accompanied by a corresponding decline in pig production in the other Member States. This is the reason why the GIP exploded in 1998 to almost 206 million heads. NL raised its production and came back to the level of 1996. Figure 5 gives a graphic impression of this development.

Pig production in the EU and in NL with considering the classical swine fever

Figure 5

The production of pig meat is mostly driven by demand. For pig meat consumption the outlook is in general positive since pig meat is likely to continue to be favoured by consumers, but clearly less than poultry. When looking at the demand for pigmeat it can be said that the human consumption in 1997 was 40.8 kg/head. For 1999 the European Commission estimates the per-head-consumption in the EU-15 with 44.5 kg and for 2000 with 44.98 kg. The degree of self-sufficiency in the EU-15 is over 100 % (in 1997: 107 %) which means that the EU is a net-exporter.

The EU produces about 20 % of the world's pig meat (world production: 78,9 million tons). The biggest producer of pig meat in the world is Asia, which produces more than 50 %. The USA has a share of 10 % (Figure 6).

Order form

I would like to subscribe to Statistics in focus (from 1.1.2000 to 31.12.2000):

(for the Data Shop and sales office addresses see above)

Formula 1: All 9 themes (approximately 140 issues)

Paper: EUR 360

PDF: EUR 264

Paper + PDF: EUR 432

Language required: DE EN FR

Formula 2: One or more of the following seven themes:

Theme 1 'General statistics'

Paper: EUR 42 PDF: EUR 30 Combined: EUR 54

Theme 2 'Economy and finance'

Theme 3 'Population and social conditions'

Theme 4 'Industry, trade and services'

Theme 5 'Agriculture and fisheries'

Theme 6 'External trade'

Theme 8 'Environment and energy'

Paper: EUR 84 PDF: EUR 60 Combined: EUR 114

Language required: DE EN FR

Please send me a free copy of 'Eurostat Mini-Guide' (catalogue containing a selection of Eurostat products and services)

Language required: DE EN FR

I would like a free subscription to 'Statistical References', the information letter on Eurostat products and services

Language required: DE EN FR
