Agricultural output prices for EU-25 in November 2004, 7.1% lower, in real terms, than previous year's level..... 1

EU-25 Input prices, in real terms, 0.6% lower in November 2004 than in November 2003 ... 2

Agricultural terms of trade in November 2004, 6.7% lower than previous year's level..... 2

Agricultural price trends for EU-25 in November 2004¹

Agricultural output prices for EU-25 in November 2004, 7.1% lower, in real terms, than previous year's level²

- Overall output prices were down by 7.1% mostly due to the sharp decrease in *Crop output* prices (-11.1%).
- In line with the price evolution in the last three months, the price index for *Crop products* as a whole for November decreased 11.1% in relation to November 2003. All products except *Fruits* (+3.9%) recorded a significant price decline which only in the case of *Other crop products* was beneath 5%. The price of *Cereals* went down by 26.5% reinforcing the sharp declines (over 15%) observed in the last two months, due to the extraordinary harvest of this year.
- The annual rate of decrease of the overall price index for *Animals and Animals products* (-1.7%) in November continued the tendency observed (with the exception of June and July) in the last twelve months. Since March, each of the two groups shows an opposite evolution: the index for *Animals* increased by 3.7% and the index for *Animal products* decreased by 7.3% in relation to November 2003. As it happened in the previous month the most significant changes for *Animals* were the price increase for *Pigs* (+12.9%) and the diminution of prices for *Other animals* (-8.5%). Concerning *Animal products*, *Other animal products* continued being the only product with a price index higher (+4.3%) than a year before. Coherently with a long downwards trend, the price of *Milk* went down (-1.3%), whereas *Eggs* showed a sharp decline (-33.0%) which reinforces the high diminution observed in September and October (-24.9% and -31.5% respectively).
- Except for Estonia and Finland which showed a slight increase (around 0.5%), output prices went down in the remaining 20 Member States for which information is available with decreases between 8% and 18% in Germany, France, Italy, Hungary, Malta and United Kingdom. This evolution was highly influenced by the price of cereals: for example in Hungary where it was registered the biggest decrease of output prices (-17.6%), *Cereals* prices went down by 40% in relation to November 2003.

¹ Eurostat and the Member States are rebasing the agricultural price indices from 1995=100 to 2000=100, and all the indices in this report are now expressed on the new base. Due to a lack of data, the estimate does not include: Cyprus, Latvia and Poland. In addition, Eurostat has made ad hoc calculations for Italy and Portugal, which provide the indices in the old base 1995=100 (further details may be found in the methodological notes).

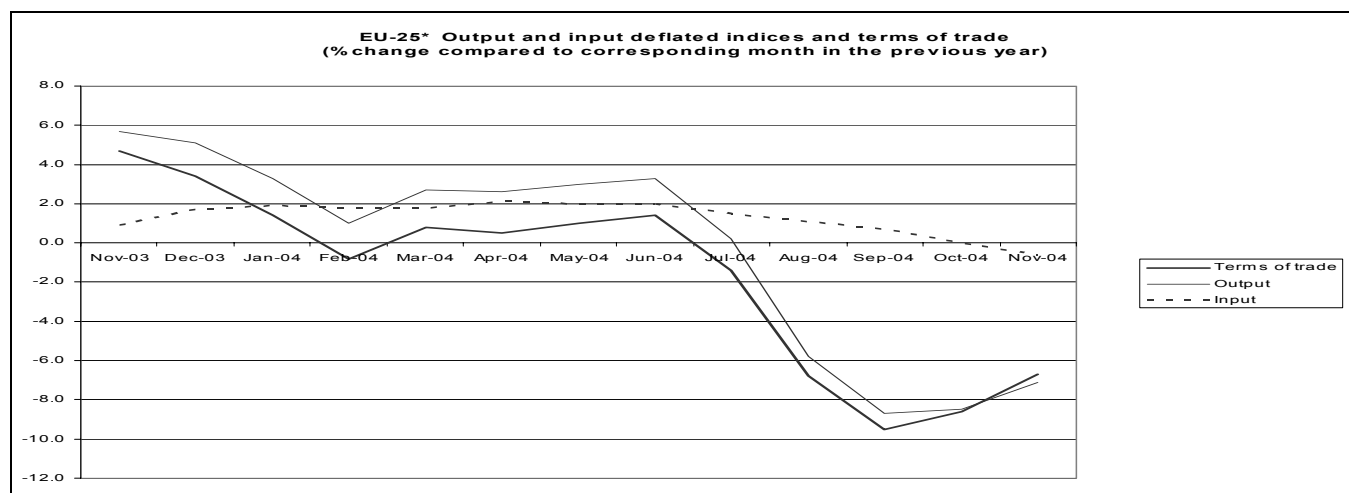

² Unless otherwise stated, all index changes referred to in this Statistics in Focus are in real (deflated) terms.

EU-25 Input prices, in real terms, 0.6% lower in November 2004 than in November 2003

- For the second time in the last twelve months, the price index for *Goods and services currently consumed in agriculture* (input1) registered a slight decrease (-1.0%) respect to the same month of the previous year. This was mainly due to the decrease of *Animal feedingstuffs* prices (-7.8%). As it happened last month, prices also went down for *Plant protection products and pesticides* (-2.0%) and for *Veterinary expenses* (-1.1%). The remaining products showed increases, being the most significant for *Energy; lubricants* (+12.0%) and for *Fertilisers and soil improvers* (+4.6%).
- The price index for *Goods and services contributing to agricultural investment* (input2) showed also a small decrease (-0.1%) in relation to November 2003 in line with the evolution in previous months.
- Across the 21 Member States for which information is available (see table 3) input price indices ranged from -4.7% in Belgium to +6.2% in Slovenia.

Agricultural terms of trade in November 2004, 6.7% lower than previous year's level

- Coherently with the evolution of output and input prices, the agricultural terms of trade, calculated by dividing the real output price index by the real input price index, moved similarly to the output index in the last twelve months, with a maximum in November 2003 (+4.7%), and a continuous fall in the annual rate of change since June 2004. Nevertheless, since September, when the annual rate reached -9.5%, it was observed a slight improvement in the decrease in relation to the previous year: -8.6% in October and -6.7% in November.
- Only 2 Member States show a positive rate of change compared to a year before: Belgium (+2.1%) and Luxembourg (+3.3%). The remaining 19 Member States recorded decreases, surpassing the 10% in France, Hungary, Malta, Slovenia and the United Kingdom.

➤ ESSENTIAL INFORMATION – METHODOLOGICAL NOTES

Purpose of the Agricultural Price Indices (API): to provide information on trends in producer prices of agricultural products and purchase prices of the means of agricultural production. It uses the concept of *Market price* (or *producer price* in the context of agricultural accounts) which is defined as the price received by the producer *without* the deduction of taxes or levies (except deductible VAT) and *without* the inclusion of subsidies.

Base period: This concept is involved in the calculation of a price index, (i) in determining the weights for each product in the field of observation (*weighting year*) and (ii) in determining the base prices for these products. Furthermore, the term *base year* is also used to refer to the year for which the index is fixed at level 100. The base for the agricultural indices is changed every five years with effect from 1970. This means that rebasing is done for the years ending in "0" and in "5".

The five-yearly rebasing comprises three major changes:

(i) change of the base year; in the current rebasing this base year is 2000;

(ii) change of the weighting coefficients to adapt them to changes which have taken place in the last few years in the structure of European agricultural production and in the production techniques. With the rebasing of the EU API to the base 1995=100, the methodology of EU API was adapted in order to be closer in line with the new accounts methodology. In the current rebasing (2000=100) the same methodology is applied but the general structure of the EU output and input indices, i.e. the list of groups, subgroups, classes, subclasses and categories for which partial indices should be calculated, has changed;

(iii) update of the data used in order to account for changes in the markets;

Calculation of national indices: The EU Agricultural Price Indices are calculated by each Member State on the basis of the Laspeyres formula with base and reference year 2000.

The value weight attached to each elementary index in the output index is equal to the value of the sales of this product (exclusive of VAT) over the base period.

Means of production have to be valued at the purchase price which is the price the purchaser actually pays for the products. It includes *taxes less subsidies on products* (but excludes *deductible taxes like deductible VAT*).

The index is expressed in the form of the weighted average of the elementary indices with fixed base weights. The weights used are values (of sales or purchases) and not quantities. In the case of highly seasonal products such as fresh fruits and fresh vegetables the method of variable baskets with fixed monthly weights in the base year is used for the monthly indices. Thus for each of the two groups (*Fresh fruits* and *Fresh vegetables*) each Member State determines 12 monthly baskets of representative products.

Calculation of indices for EU: for this purpose the following steps should be applied:

(i) Estimation of the API for the European Monetary Union (EMU) with the national weights.

(ii) Conversion of the EMU weight and weights of the non-EMU Member States into Purchasing Power Standards (PPS);

(iii) Calculation of the API for the EU with the PPS weights

Availability of data and Eurostat estimations: When writing these notes the following information was available in Eurostat:

Weights: For EU-25, weights for the new rebasing are available for all the Member States except Cyprus, Italy, Latvia, Poland and Portugal. The symbol (:) is used when data are not available.

For calculating the weights for EU-25, Eurostat has made the estimation without Cyprus, Latvia and Poland. For Italy and Portugal weights were estimated from the Agriculture Economic Accounts.

Indices: In the new base, price indices for year 2004 are available for all the Member States except for Cyprus, Italy, Latvia and Portugal for input and output products, Poland for output products and Estonia for input products. For Italy and Portugal price indices were provided in the old base 1995=100. In addition, for the period 2000-2003 indices in the new base are missing for some countries.

Eurostat has recalculated the monthly indices in the new base for those countries for which indices are not available for 2004 and also for 2003, in order to be able to calculate the yearly rates of change.

Journalists can contact the media support service:

Bech Building Office A4/017 • L-2920 Luxembourg • Tel. (352) 4301 33408 • Fax (352) 4301 35349 •

E-mail: eurostat-mediasupport@cec.eu.int

European Statistical Data Support:

Eurostat set up with the members of the 'European statistical system' a network of support centres, which will exist in nearly all Member States as well as in some EFTA countries.

Their mission is to provide help and guidance to Internet users of European statistical data.

Contact details for this support network can be found on our Internet site: www.europa.eu.int/comm/eurostat/

A list of worldwide sales outlets is available at the:

Office for Official Publications of the European Communities.
