Agricultural output prices for EU-25 in June 2005, 8.0% lower, in real terms, than previous year's level..... 1

EU-25 Input prices, in real terms, 1.2% lower in June 2005 compared to June 2004 2

Agricultural terms of trade in June 2005, 6.9% lower than previous year's level..... 2

Agricultural price trends for EU-25 in June 2005

Agricultural output prices for EU-25 in June 2005, 8.0% lower, in real terms, than previous year's level

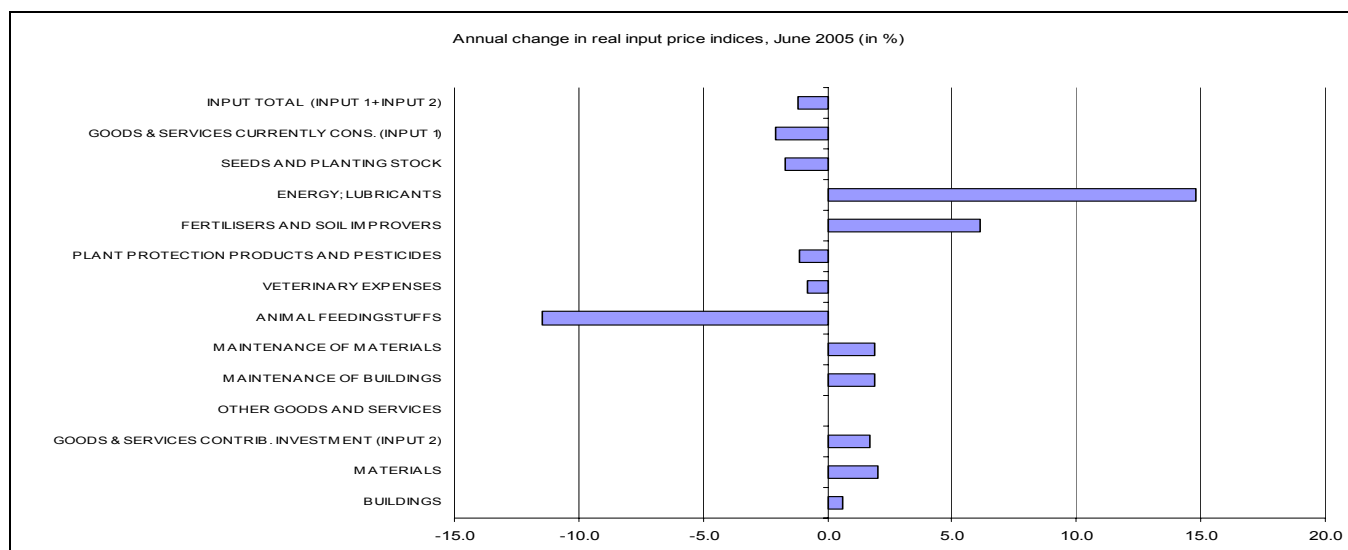

Annual change in real output price indices, June 2005 (in %)

- The price index for *Crop products* as a whole for June (-13.2%) was much lower than for the same month of 2004, in line with the last ten months for which the rate of decrease (except in March) surpassed 6%. All products, exception *Olive oil* (+4.5%), recorded decreases, especially high for *Cereals* (-19.9%), *Industrial crops* (-9.9%), *Fruits* (-14.6%) and *Wine* (-15.2%). For the first time in 2005 the rate of change for *Vegetables and horticultural products* was negative (-1.5%) which contrasts with the high growth observed in the previous four months. *Other crop products* price index also showed a significant decrease (-4.9%).
- The overall price index for *Animals and animal products* was 2.1% lower than in June 2004. The index for *Animals* fell by 0.8% ending the upwards trend observed since March 2004. The small fall in the price of *Animals* was mainly determined by the significant decreases in the prices of *Pigs* (-3.8%) and *Poultry* (-6.5%), which were not compensated by the moderate increases in the prices of *Cattle* (+2.5%) and *Sheep and goats* (+1.7%). The relatively high rate of decrease in the price of *Pigs* contrasts strongly with the sharp growth observed until March, with growth reaching 22.5% in December 2004 and 17.8% in January 2005. *Other animals* (-2.5%) registered a decrease in line with recent months. Concerning the other component of *Animal Output, Animal Products* (-4.4%) continued the negative trend observed over the last twelve months with falls of more than 4.0% since July 2004. As in the last three months, all products show decreases in prices in relation to the previous year. Consistently with a long downwards trend, the price of *Milk* went down (-2.4%), while *Eggs* showed a sharp decline (-11.1%), which continues the steep decline observed since August 2004.
- Output prices went down in 21 of the 23 Member States for which information is available (see Table 2) with decreases between 9% and 15% in Belgium, the Czech Republic, Germany, Spain, Cyprus and Hungary. In contrast, prices rose in only 2 Member States: Lithuania (6.8%) and Slovenia (2.1%).

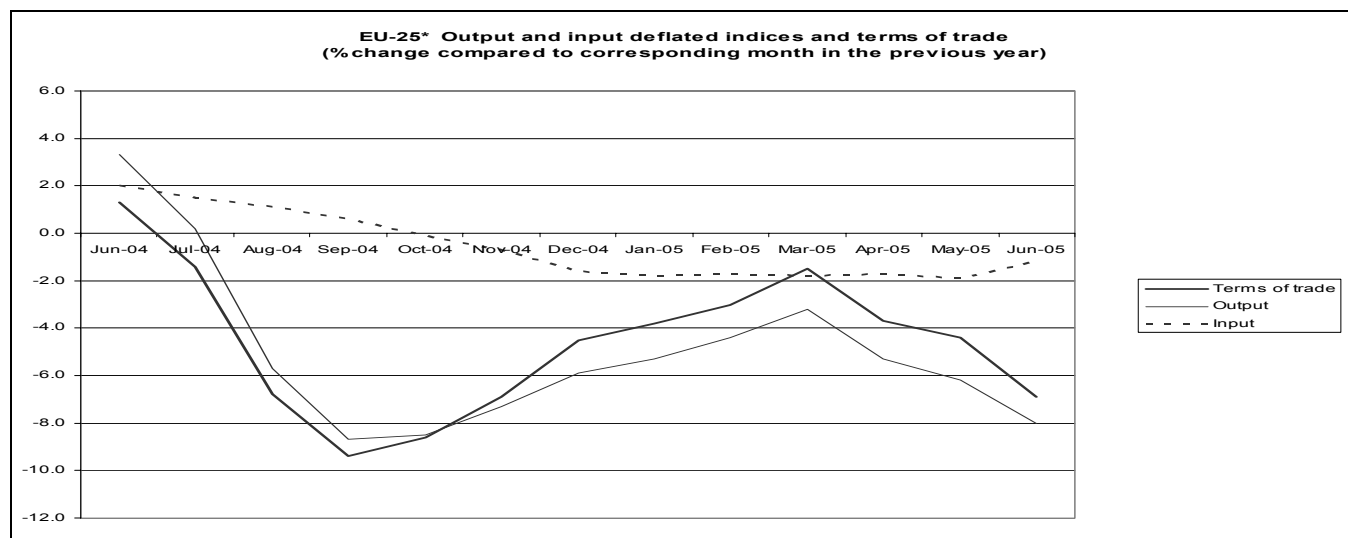

Eurostat and the Member States are rebasing the agricultural price indices from 1995=100 to 2000=100, and all the indices in this report are now expressed on the new base. Due to a lack of data, the estimate does not include: Latvia and Poland for Output and Estonia and Poland for Input. In addition, Eurostat has made ad hoc calculations for Italy and Portugal, which provide the indices in the old base 1995=100 (further details may be found in the methodological notes).

EU - 25 Input prices, in real terms, 1.2% lower in June 2005 compared to June 2004

- As in the last eight months, the price index for *Goods and services currently consumed in agriculture* (input1) registered a slight decrease (-2.1%) with respect to the same month of the previous year, which confirms a downwards tendency in prices. This rate of decrease was mainly due to the evolution of *Animal feedingstuffs* prices (-11.5%) which has been consistent since January 2005 (between -10.7% and -13.0%). As in recent months, prices also went down for *Seeds and Planting Stocks* (-1.7%), *Plant protection products and pesticides* (-1.1%) and *Veterinary expenses* (-0.8%). The remaining products showed increases, most significant for *Energy; lubricants* (+14.8%), for which the rate of increase is almost three percentage points higher than in May, and for *Fertilisers and soil improvers* (+6.1%).
- The price index for *Goods and services contributing to agricultural investment* (input2) has risen (+1.7%) since January 2005, after twelve months of steady decreases. The two components show a positive rate of increase: +2.0% for *Materials* ("Machinery") and +0.6% for *Buildings*.
- Across the 23 Member States for which information is available (see table 3) input price indices went down for 14 Member States (between -3.9% in Portugal and -0.4% in France) and increased in the remaining 9 (between +0.1% in Denmark and +12.6% in Malta) in relation to June 2004.

Agricultural terms of trade in June 2005, 6.9% lower than previous year's level

- Consistently with the evolution of output and input prices, the agricultural terms of trade, calculated by dividing the real output price index by the real input price index, moved similarly to the output index in the last twelve months, with a maximum in June 2004 (+1.3%), and a negative annual rate of change since them. After six months of a continuous improvement in this ratio (from -9.4% in September to -1.5% in March), it has worsened again since April 2005, reaching -6.9% in June.
- Only Lithuania, Slovenia and Slovakia show a positive rate of change compared to a year before. The remaining 19 Member States recorded decreases, surpassing 6.5% in Belgium, the Czech Republic, Germany, Spain, France, Cyprus, Hungary, Malta, Finland and Sweden.

➤ ESSENTIAL INFORMATION – METHODOLOGICAL NOTES

Purpose of the Agricultural Price Indices (API): to provide information on trends in producer prices of agricultural products and purchase prices of the means of agricultural production. It uses the concept of *Market price* (or *producer price* in the context of agricultural accounts) which is defined as the price received by the producer *without* the deduction of taxes or levies (except deductible VAT) and *without* the inclusion of subsidies.

Base period: This concept is involved in the calculation of a price index, (i) in determining the weights for each product in the field of observation (*weighting year*) and (ii) in determining the base prices for these products. Furthermore, the term *base year* is also used to refer to the year for which the index is fixed at level 100. The base for the agricultural indices is changed every five years with effect from 1970. This means that rebasing is done for the years ending in "0" and in "5".

The five-yearly rebasing comprises three major changes:

- (i) change of the base year; in the current rebasing this base year is 2000;
- (ii) change of the weighting coefficients to adapt them to changes which have taken place in the last few years in the structure of European agricultural production and in the production techniques. With the rebasing of the EU API to the base 1995=100, the methodology of EU API was adapted in order to be closer in line with the new accounts methodology. In the current rebasing (2000=100) the same methodology is applied but the general structure of the EU output and input indices, i.e. the list of groups, subgroups, classes, subclasses and categories for which partial indices should be calculated, has changed;
- (iii) update of the data used in order to account for changes in the markets;

Calculation of national indices: The EU Agricultural Price Indices are calculated by each Member State on the basis of the Laspeyres formula with base and reference year 2000.

The value weight attached to each elementary index in the output index is equal to the value of the sales of this product (exclusive of VAT) over the base period.

Means of production have to be valued at the purchase price which is the price the purchaser actually pays for the products. It includes *taxes less subsidies on products* (but excludes *deductible taxes like deductible VAT*).

The index is expressed in the form of the weighted average of the elementary indices with fixed base weights. The weights used are values (of sales or purchases) and not quantities. In the case of highly seasonal products such as fresh fruits and fresh vegetables the method of variable baskets with fixed monthly weights in the base year is used for the monthly indices. Thus for each of the two groups (*Fresh fruits* and *Fresh vegetables*) each Member State determines 12 monthly baskets of representative products.

Calculation of indices for EU: for this purpose the following steps should be applied:

- (i) Estimation of the API for the European Monetary Union (EMU) with the national weights.
- (ii) Conversion of the EMU weight and weights of the non-EMU Member States into Purchasing Power Standards (PPS);
- (iii) Calculation of the API for the EU with the PPS weights

Availability of data and Eurostat estimations: When writing these notes the following information was available in Eurostat:

Weights: For EU-25, weights for the new rebasing are available for all the Member States except Italy and Latvia

For calculating the weights for EU-25, Eurostat has made the estimation without Latvia. For Italy weights were estimated from the Agriculture Economic Accounts.

Indices: In the new base, price indices for year 2005 are available for all the Member States except for, Italy, Poland and Portugal for input and output products and Estonia for input products¹. For Italy and Portugal price indices were provided in the old base 1995=100. In addition, for the period 2000-2004 indices in the new base are missing for some countries.

Eurostat has recalculated the monthly indices in the new base for those countries for which indices are not available for 2004 and also for 2004 and 2003, in order to be able to calculate the yearly rates of change.

The symbol (:) is used when data are not available.

¹ Output indices for Latvia are under revision.

Journalists can contact the media support service:

Bech Building Office A4/017
L - 2920 Luxembourg

Tel. (352) 4301 33408
Fax (352) 4301 35349

E-mail: eurostat-mediasupport@cec.eu.int

European Statistical Data Support:

Eurostat set up with the members of the 'European statistical system' a network of support centres, which will exist in nearly all Member States as well as in some EFTA countries.

Their mission is to provide help and guidance to Internet users of European statistical data.

Contact details for this support network can be found on our Internet site: www.europa.eu.int/comm/eurostat/

A list of worldwide sales outlets is available at the:

Office for Official Publications of the European Communities.
